ut if you must get in fixed in
warrantee you'll have to send it to the manuf - out of warrantee forget
it - they've priced the parts greater than the cost of a new set. Very
dissapointing to be living in a dispossable world.
So imho the 42' projections are the way to go. They don't look as nice a
an lcd or plasma, but *they* don't look as good as a CRT, so you can' t win.
Good call on the Sony. We've looked at the Sony and the Panasonic and
it's a tough call.
