Subject: DP/4 Drum Plate presets ppj now up

I'm starting to create some presets for the DP plugins Mike's been
porting. I know that many favor "rolling your own" but sometimes it's
good to at least have a starting place - particularly when a plugin has
many parameters or has odd non-linear goodies to take advantage of.

So I threw a dozen I tweaked up into a ppj (some derived from Logic's
Platinum Verb and some came from just messing about with the
parameters) and put it on the Wiki as a starting place. My monitoring
situation is far from ideal until I get into a properly treated room in
January but they'll at least serve as a "proof of concept" for the
downloads mechanism at the Wiki until I have time to tackle it properly.

Give 'em a try if you can and let me know if the file upload/download
system works properly from one end to the other.

And if you have some presets that you want to share with the rest of
the community (either for Mike's plugs or any of the previously
existing ones), just copy them into ppjs and email them to me and I'll
put them up in their respective places (ane day I also hope to assemble
all the presets for the many different plugins into one large master
ppj for easier handling).

Thanks so much for doing this, Kerry!!!

Send me your number when you get a chance. I'm pretty sure the number I
have for you is out of date.

All the best,

Mike

I haven't got a paris rig where I'm sitting, but it pulled right down in IE7
on Windows XP SP3 without any incident. I use right click/save as, FWIW.

Thanks AA, that's good to know, I haven't played with file
upload/download functionality on the Wiki much. More presets coming as
time permits.
