Hi Everyone,

This is my first time posting and I really could use some help. I just installed a 2nd EDS card and I am getting this message:

"Your EDS cards are not setup correctly and play back may not be correct"

I followed the directions(pictures) as found in a FAQ document I found on the Internet. I also oriented all the red strips on the cables toward the back of the computer as described in the manual. My MEC is plugged into the card closest to the video card and there are 2 slots vacant between the video card and first EDS.

Anyone know how to fix this? Thanks for your help.

Michael
