I can't for the life of me access the Cubase 4.0.1 update on their ftp site.
Would someone mind DL'ing this and attaching it to an e-mail and sending ti
to me. I'm trying to use an outboard processor on a group bus in Cubase 4
and the delay adjustment doesn't seem to be working at all so I'm getting a
bunch of phasing. Hopefully there is a fix in the patch..

Here is the link. I need the one for PC's.

http://www.steinberg.de/1044_1.html

animix at animas dot net

Much appreciated. If you do this please post to the group that it's done so
I don't get 40 of these.

Deej
