I know you do a ton of acoustic stuff, will this thing get attitude?
Is it too wispy for that? Is it harsh or sibilant?
How is the noise floor? Could it hold up in front of a drum kit?

Please tell all ASAP, as I may have a deal on one. Yup. Left click on the desktop, and turn off the desktop cleanup wizard:

cons, what's up with that? It runs Ok, but no icons.

Thought you guys would know.

Thanks
JamesHey Deej,
I know you have a SE Gemini,
Can you tell me what you think it would do on rock vocals?

ontrols so it is a little slow for drums. The Compeller could
best be described as an automatic leveler. It sounds like to an engineer
riding input levels rather than like a compressor. I have one and use it
on acoustic instruments and sometimes on vocals before an LA2a or Distressor

type compressor.

Some of the old 166 compressors with the original DBX VCA do sound good.

units are rare. I have a pair of 161s (Unbalanced 160VU) that I hold quite dear to my heart.

Gene

..On the subject of 2bus / mastering compressors, there are several new contenders on the software side that close the gap somewhat to the hardware units.

<http://www.pspaudioware.com/indexen.html?url=http://www.pspaudio.com/plugins/mastercomp.html>

- Demo sounds very good, and note Sakis endorsement.

tried these yet.

I listened to the new plug from Abbey Road (Chandler Limited emulation) at AES and from what I could tell using headphones it was very close to the Chandler Limited hardware. The hardware and software were set up to go back and forth.

Gene

P.S.

PSP MasterComp for 249.00 is not a 4000.00 Neve but should be given a serious listening. The last time I was in Sony's mastering room in Santa Monica they were using a Tube-Tech.

I have one. The eq is excellent and so far I'm very happy with the pre but I don't have much experience on that side to be able to judge. Sorry i emailed you at your nospam address and have now emailed you at the other address.

Gene,
I have a very early 166 and a 161VU. Is it possible they use the same vca?!?! I couldn't find anything out doing a=20 google search about it. I wonder if the new DBX (Harmon) would=20 have any records on that? I'd open them up and look but I'm not sure which component is the VCA. =20

Any tips for me to learn more? I'll look inside for clues.

e in a good position to listen to the two units side by side.
This is really the best way anyway, particularly since many of the older
units are way overdue for a rebuild/recalibration.
Looking inside is not always helpful. The early VCAs are not always labeled.

The attached image looks generally like most of the early VCAs.

The Lucid clock is really cool here. Nice bit of improvement in the imaging.

I think you'd notice a much bigger improvement with compression over "better" converters.

JMO.

The VCA is in a pack on my 160VU's, and very hard to get at. It's as I recall a little black box on the circuit board. Betcha you have the same setup.=20

AA

"Tom Bruhl" <arpeggio@comcast.net> wrote in message = news:436afd88@linux...

Gene,

I have a very early 166 and a 161VU. Is it possible they use the same vca?!?! I couldn't find anything out doing a=20 google search about it. I wonder if the new DBX (Harmon) would=20 have any records on that? I'd open them up and look but I'm not sure which component is the VCA. =20

Any tips for me to learn more? I'll look inside for clues.

Tom

>Fletcher

>

The Compeller is very much like a RNC on supernice. It has Servo = transformerless, circuitry that makes it VERY clean sounding. Unfortunately, it has = no attack or release controls so it is a little slow for drums. The Compeller = could best be described as an automatic leveler. It sounds like to an = engineer riding input levels rather than like a compressor. I have one and = use it on acoustic instruments and sometimes on vocals before an LA2a or = Distressor type compressor.

Some of the old 166 compressors with the original DBX VCA do sound = good.

Closer to a 160VU than any other DBX. I don't know what the serial = number

range is for the good units. I'm not a fan of the later 166 and the = early

units are rare. I have a pair of 161s (Unbalanced 160VU) that I hold = quite

dear to my heart.

Gene

MM1200's using Adams Smith, Tascam, Q-Loc (ick) and others. If this
is a later 1200 with the servo mod, the tape tension will be more
stable, but I would still not sync Paris to the 1200. I would instead
use a SMPTE stripe in Paris (audio track) and send the TC out of a
pre-fade Aux to the synchronizer. The 1200 could then chase the
timecode coming from Paris. As this is an audio track, you would have
to have at least 20 seconds of TC pre-roll available in Paris for the
1200 to lock properly.

If you use a Mac and have an interest in TriTone Digital plugins, the pro version of ColorTone is available for download as a beta demo. This is a convolution based tone shaper with some unique new concepts and a library of great sounding impulse responses. It also allows you to add your own IRs.

The included impulses files are named somewhat cryptically to avoid legal issues, but each one I have tested so far sounds very good.

>I was going to make the master bedroom the control room, sleep in the second
>bedroom, and make the sunroom the guests room, but various things are working
>against that and it doesn't look like happening that way.

So are you going to set it up to have a control room, plus a separate recording room? Or are you mainly going to be tracking yourself & you just want a single room that works as a good control room that you can also mic something up in & monitor through headphones when you're tracking? Just curious?

I'm actually looking at moving, myself... this place - which I thought would work out well for taking on some small projects in addition to doing my own stuff - is turning out to be not so conducive for that, after all. The couple of small outside projects that I've worked on here have proven that (part of the problem is the low ceilings, part of it is the layout of the place). Luckily, I got it at such a good price, that I should be able to turn a good profit on it if I sell, but then the issue becomes finding a place that DOES have the right configuration - which means, really, something that has a separate building with high ceilings, and of the right size overall.

There are lots of places around here that have guest houses or what they call "mother in-law's apartments" added on, but so far none of them have been big enough, or they've had low ceilings, too. This girl I've been dating is a loan officer for a mortgage company, and one of her real estate agent friends told her about this house that's going on the market next week that seems to have everything I want... decent size, grass yard for the dogs, swimming pool, AND a separate building that is actually... (wait for it...) an INDOOR HANDBALL COURT!

Drove by & looked at it from the outside yesterday... it is indeed a separate building, about 20 feet away from the house. The ceilings would definitely be high enough - I'm guessing about 16' to 18' high (it's towards the back a ways, so I could only guesstimate from the street), and it's big... the appraisal records have that building listed as 800 square feet. Plenty of room to build out a control room & recording room inside... I'm just crossing my fingers that it's a proper, traditional handball court, and that the floors & wall surfaces are wood!

NeilWe just got word our camping buddies had to put down their dog Patton yesterday...said a little prayer for the old guy...we watched him go from a great chipmunk/squirrel chasing, food mooching ruler of the roost to a poor

old hound with really bad arthritis....oh there was always a twinkle in his eye when the treats came out but he was a shadow of his former self....we will miss him

Here is his site

<http://notoasters.net/>

I was refered to him by Sonic Circus.
He is working on some sort of new Mic Pre, I haven't heard it though.

If you contact him, tell him Chris with the Langvins sent you.

was instrumental in helping me rebuild one of my 160's when I got them a few years back. I tcrum AT dbxpro DOT com "Tom Bruhl" <mailto:arpegio@comcast.net> wrote in message news:436ba859@linux... Thanks for the help Gene and Aaron. Some of the old 166 compressors with the original DBX VCA sound closer to a 160VU than any other DBX. The problem is that my 166 needs repair. It's not worth repairing if it's the model Gene refers to. I bought the 166 for \$1,000 when they first came out. I had to wait for delivery to the store. I'm pretty sure it was out of the first run. I am running the serial number by DBX to see what they say. Also looking for specialists in this field. I might call Eric at Earth Works. Thanks for the info. I know the 163 and the 166 share the same VCA (except as noted) and these both have different envelopes-of-attack from the 161. This has to do with the overall sound. I should point out that the person who told me about some of the early 166 boxes was not from DBX, but was a technician that I trusted and he should have known. I could be wrong about this. You should be in a good position to listen to the two units side by side. This is really the best way, anyway, particularly since many of the older units are way overdue for a rebuild/recalibration. Looking inside is not always helpful. The early VCAs are not always labeled. The attached image looks generally like most of the early VCAs.

they use the same vca?!! I couldn't find anything out doing a google search about it. I wonder if the new DBX (Harmon) would have any records on it; that? I'd open them up and look but I'm not sure which component is the VCA. Any tips for me to learn more? I'll look inside for clues. Tom; I know the 166 share the same VCA (except as noted) and these both have a different envelopes-of-attack from the 161. This has a lot to do with the overall sound. I should point out that the person who told me about the boxes was not from DBX, but was a technician that I trusted; and he should have known. I could be wrong about this. gl think this mic will work for anything you throw at it. As with any other mic, whether or not it will be the best mic for the job will depend on the source/mic/preamp interaction. I don't have a U47 here, but I'd guess from the comparisons I've heard that it would work nicely on the same kind of sources that you would use this kind of mic for. I have had good success using it with both male and female vocalists, though I haven't used it on projects in the rock genre. When I think of rock, I think of an SM57 into a Neve'esque kinda' preamp so that the singer can stick the mic down his throat if he wants to and the capsule won't collapse.

;o)

Any comments? It appears to me that the signals are recorded at 24
bit, then processed at whatever bit rate the plugin on the channel has,
including dither, or not, then reprocessed to 24 bit, then these channels

are summed. I'm no guru when it comes to this stuff, but I get this feeling that this reprocessing *per channel* is the reason the TDM systems seem to start sounding gnarly as more and more tracks are summed. What bad grammar?

I will buy Dimitrios for \$49 too!

And he should come to Denver and show me how to use Wormhole.

El Miguel (who is a kid who never grew up :)

ning about Paris/EMU/ID
is still happening. It seems it would make sense to either sell your system
and get out or just record music with it. The *I'm pissed off at ID thing is
sooooooo irrelavent, IMHO* I do wholeheartedly agree that things were
handled badly by just about everyone involved.....Ensoniq, Creative, EMU,
ID and us.. Let's move on, shall we? Either it still works, or it is still
marketable to someone else. If you bought it new, are you going to get your
money out of it????? No, but if you bought a PT system in 1997 you are

hosed too. If you sell your Paris hardware, you will likely make enough to get yourself a native sound card and converters, or whatever.

ors a 0.1 and 0.01.

This is a well kept secret among big studios that have electronics engineers in their stuff, regulation and filtering

DON'T use commercial RF filters at all in your mains.

They compress the sound and do not let the sound breathe at all after some level.

Now in Paris power supply this is a switching supply like ADI-PRO8

So bigger cap makes a difference (not very big) bypassed with 0.01 (i did not like much 0.1 because gave me more boxy sound)

0.01 is magical for great high mids/highs.

Ok I did not AB but I hear a difference on recorded tracks, remember I don;t use Paris DA for monitoring (SPDIF to PULSAR to ADI-PRO8)

The rule is not much higher cap then needed sometimes higher mains cap is not needed i.e higher caps inside Great River made the sound SLOW !

0.1 and 0.01 uf inside Great River MP made no difference !, but 1uF gave me some bass I needed (Great river has Lundahl transformers)

I encourage inside Paris power supply to leave the 180uF stock capacitor and just put a WIMA MKP or FKP (or Multicap-Musicap-expensive) of a 0.01 uF value with at least ~250V as bypasser

All the above were/are try and listen and I spent many hours in my life not writing music but instead experimenting.

I am happy to share my knowledge and encourage to try and listen for yourself with any changes.

Most of the times A/B was not needed because I immediately heard any difference for the best or worse...

If you are sometimes uncertain as what to put first and where try only the 0.01 Wima polypropylene bypassing the mains capacitors (electrolytics)

Regards,
Dimitrios

>Dimitrios I hear ya DJ. Our 13 year old Shepard dissapeared 10/15. She was just gone
sparing us the saddness of finding her empty shell. Didn't look too hard for
her in the woods, she choose her place and I didn't want to dishonor that
choice with a human burial. Perhaps she died with honor, in battle.

GGreat story - thank you. Makes me think of my dog too - they
pack so much into such a short life and always leave us wanting
more.

Hi, is the C-16 cable just an ordinary telephone cable? Wired the same? =
Also, anyone know where I might obtain the sample project disk?
Many thanks,
Edna

Edna,

This is a standard CAT5 LAN cable, not a telephone cable. Also, make sure you do ****NOT**** use a crossover cable.....I repeat..... do ****NOT**** use a crossover cable.....errrrr.....and make sure that whatever you do, ****NOT**** use a crossover cable. Using a crossover cable *will* fry your MEC.....no kiddin'. It's one of the wonderful little omissions in the Paris manual.

;Do

Deej

Here's a link to cables:

<http://www.newegg.com/Product/ProductList.asp?Submit=3Dlist& amp;SubCategory=3D=132&CMP=3DKNC-GoogleAdwords&ATT=3DCables>

Or if you live in a city like most people, you can buy these at Office Depot/Best Buy, etc. I always have to order my stuff online because I live in a cave in the wilderness.

;o)
