Okay, I got a new rig fired up and booting properly with Paris with XP = Pro.

Here's what I've done so far:

- 1) I checked all SCSI cables and they turned out to be fine with one EDS card. I did some finessing of the pins alignment.
- Checked all clock and interconnect cables with two cards.
 They all seem to be fine using the same A card attached to the 442 and four different B cards as Aaron suggested.
- 3) Tried four cards as card B and they seemed to work with no hardware attached to them. Seemed good.
- 4) I tried to scale back to just one card to try each as an A card with = the

442 attached but now Paris won't boot. Major badness.

It says:"An error occurred while reading the "Default Project" for new = project settings.

A new empty project will be created instead. There are not = enough resources

available." I click that away and it then says:

"Error in creating new project. There are not enough resources = available."

The readme says to try reinstalling the Paris drivers. I did but no = help there.

Two cards have given me the same results. I assume it's a driver = issue

or something else. I tried reducing the cache size in Paris.cfg but = that

didn't help either. I am seeing the Paris MIDI driver and a single = Scherzo.

When I click the faulty Paris project away it takes Windows with it = usually.

I really don't have time for this crap (not that it's your fault) but = it's making me rethink everything all of the sudden.

Oh and since Paris hasn't been in front of Cubase feeding it ADAT WC I = can't open any

of my Cubase projects. I get a white screen and can go nowhere. Great = huh?

This is getting disgusting. Sorry for the attitude but I have no time, = tons of gigs and=20 studio work and I can't get either system to run.

Anything at this point would be better than what I've got. Thanks for whatever you can come up with,=20 Tom
