Hi
I just got off the phone with a friend who said that no sound-replacer works well with Paris but he recommended drumagog and Logic. Are you guys successful in using Drumagog with Paris on mac? My mac is an old 400 Mhz G4.

Thanks!!!
CJG

Hello CJG,
I just installed it yesterday. I am totally blown away with Drumagog in my Paris! I always have a hard time getting the bass drum track to sound the way I want it to. Soooo I installed Drumagog as an insert and it will replace the bass drum notes with the sampled bass drum of my choice. Velocity and everything! I would be honored to walk you through step by step how to install and use drumagog in Paris in a 400 mhz G4.

Thank You Steve!!
I will seriously consider a DRUMAGOG then.
Thanks for offering me help! You will hear from me if I need help - again
thanks!

I don't have drumagog w/Paris, but I have been using Aprigga with great success. The price is mighty fine too.

Check it out.

I use Drumagog. It really helped my studio in a big way. If you ever are interested in seeing what it can do for you, try the trial version. If it don't do as you would like, call Rim-the creator of it, and it WILL do as you want. He has got to be the friendliest guy, and will give you the time of day as if you bought the full bull.
