Hello everyone,

I have an old sampler, I´d like to know how I can play for example track 1 out of the output of the mec- but not the mail output, to record stuff with the sampler.

I tried to do it but the patch-bay doesn´t want to do so...

Thnks for help!

Micha

Use the patchbay, and an AUX set to 'External' it should work.

Cheers

Kris

How about using monitor outputs 3/4. I think it's the same output as the mains but goes thru the level knob on the C16.

If you want mono, hard pan the tracks L/R and use one output.
