Ok, I was working whit a singer last night tryin out my NOS tube,

The mic was sounding nice, then I hear a faint hum.

Argg, I made sure the body of the mic was tight, and all that.

So today I decided to test (The client never even heard the hum)

Turns out it is not the mic, but seems to be coming from my compressor rack.

Nothing has changed although it is an old house, but I did have it grounded last summer.

Oh and yeas the power is sort mickey mouse with 6 way surge protectors,

I am going to do some trouble shooting, but I am thinking about a conditioner,

I ahve heard they don;t do a hell of a lot though.

Anyone have any ideas?
