Just a question of clarification? What's currently included with a purchase of the current driver package?
(Music PC currently running XP still)

You get a custom written installer that will install the new scherzo driver (64 bit or 32 bit, depending on platform) and either or both PARIS 3.0 and PARIS 2.1.

The original PARIS installation program was 16 bit and would not run on a 64 bit windows.

I just posted a pace free PARIS 3.01 with Edmund Pirali's permission. You'll have to replace the PARIS 3.0 executable with that newly posted file to use PARIS ver. 3.

Plus, you get my help if you need it.

I really only recommend the new drivers for new machines. I had to add a bunch of double buffering to get the drivers to work on 64 bit windows. If you're on a single core PC running XP, just stick with Chris's drivers.

I hope this helps.

Mike
