.....oh man.....my life is already a living hell.....but.....if you had 8 x PC's, running Win 9x, each with an Opcode Studio 64XTC, could timeline sync 8 x paris systems. That way you would have the global insert on each one for compression and EQ and then you could sum the main outputs of each to something like this:

http://www.manleylabs.com/containerpages/16_299.html

.....hehehe!!!!

Man.....it's time for me to stop drinkin coffee.
