Hi Everyone,

It's been tough to make progress this year, but I'm finally getting traction. I've just started testing a version of the PSCL that is designed to work with jBridge. For those who haven't used jBridge, it allows a 32 bit host to connect with 64 bit VST files. I just started testing it with some 64 bit Waves plugins. So far, so good. The updated PSCL has a low priority thread that checks for jBridge processes and moves them off the CPU used by the PARIS application. This way, we can run 64 bit VSTs on all but one available CPU cores, while not running into the thread-safety issues in the PARIS application.

jBridge can be found here:

<https://jstuff.wordpress.com/jbridge/>

My next move is to work on the kernel driver (scherzo.sys). I bought a new ASUS motherboard with a PCI slot, and the driver does not work with this new board. The new board uses a I/O MMU, which is a new thing for PCs. I suspect that this is the problem, but I'll know more next week. An I/O MMU puts the PCI bus behind a memory controller that has to be programmed in order to allow PCI cards to access main memory. It's an extra level of indirection put in place for security reasons. The driver was not designed for this kind of thing.

I still haven't gotten the EV security certificate. The eventually rejected by documents that were signed by a justice of the peace. It's completely insane. An accountant or a lawyer will do just fine, but a judge can't be trusted. It's nuts. I'm going to go see a notary after I get the kernel driver updated. I only get a year on the certificate, so I think it makes sense to wait until I have this next phase done.

That's all I have to report for now.

All the best,
Mike

Edit Functions Settings EQ Aux Tracks Automation

The mixer interface displays 10 channels, each with a set of controls including a bypass button, a list of processing modules (Abbey Road, CLA-2A, dbx-160), an EQ 1 section with frequency, gain, and bandwidth knobs, an EQ 2 section with a frequency knob, a solo/mute section, and a fader. The EQ 1 section for each channel is set to 1000 Hz, 0.0 dB, and 1.5 BW. The EQ 2 section is set to L 100 or R 100. The faders are set to 0.0. The mixer also features a transport bar at the bottom with a time display of 00:01:48.555.

The IR-L convolution reverb window shows settings for a concert hall. The name is "Hall - 1", type is "Concert Hall", and the date is "24 Mar 2004". The sample rate is 96000Hz and the emitter is Genelec 530D. The convolution time is 1.85s. The RT60 is 1.4s. The window also displays a frequency response graph and various controls like "Reverb Time", "Dry/Wet", "Direct", and "Output".

Parameter	Original	Current
Convolution	1.85s	1.85s
RT60	1.4s	1.4s
Channels	4	4
Size	11267	11267
Distance	13m	NA

The transport control window shows standard playback controls: stop, play/pause, record, and next. It includes a time display showing 00:01:48:16.6 and 00:00:00:00.0. There are also buttons for "PUNCH" and "LOCK".

Mike, you're the man. I am still lurking here. Still using PARIS. Still missing my modern plugins.

Thanks for you efforts,

Phil

Aha, hi all. I ready this Threads , because i Wonder myself, that i cannot use my Plugins from Universal Audio. So I habe to try this bridge.

I will Report If IT Works fine.

Hi Dan,

You'll need an updated driver, which I need to get out the door.

I've got to make an appointment to see a notary or a lawyer to get the EV driver signing certificate, and I've just been unable to make it happen. I'm sorry everyone. I'll do better.

All the best,

Mike

Hi Mike,

if you have ready the new driver,let me know, i will donate your work in that way to purchase this driver in your shop !

Best regards

Dan

I still around too Mike, I've been slowly buying PARIS parts and expanding my PARIS rig.
