Hi folks

I have recently put Paris on a PC running XP. It's got a AMD Duron processor, 1.54Ghz and 640Mg of Ram.

What would you set the config settings to..?

Man, it's been a long time since I set PARIS up on a PC, but I have to do it again very soon, so I'll pull out my old .cfg file for you and post it as soon as I find it, if you haven't got it settled already.
