Subject: Big Error Problem! _tptQueProject: Error in queing project Error Code 1879049233/70000029
Posted by Rich Lamanna on Sun, 16 Nov 2008 17:58:38 GMT

Hey all, finally back, built a new computer, installed fios and finally got around to setting up my news account again. Been a while. I keep getting this error message after doing several cut and paste edits on a project. I can reopen the project and play it from the middle, but if I attempt to que it from the beginning the error message keeps popping up, forcing me to shut down paris. HELP, this project is for Othello Molineaux's new cd.

_tptQueProject: Error in queing project Error Code 1879049233/70000029

That's a mouthfull! Thanks,
Rich

Do a save as the moment it comes open to a new name. You're on 3.0, right? Render those tracks before touching the play button. I'm betting you have something funky in an edit on the play field somewhere. Pay attention to the tasks/progress window, if it crashes again you'll want to know what it was working on. Better yet, just render one track at a time. Also, don't let the 'dead space' below tracks 17/18 in the wave editors show, and if they do then open/close that window. That's a known bug that BT discovered that causes some wonkiness.

Thanks John & Aaron, I will get this stuff Wiki'd ASAP. For some reason
my own 029 link on the "Bugs/Troubleshooting" page points to a bad
link. Fixing - d'oh!

OK, this is what it looks like now.

from my notes of previous instances.....

I've dealt with this issue quite a bit.

        I've even caused it on purpose to try to figure out how to fix
it.
        (recording with looping on (with no punch points) will cause it)

        Anyway, in ALL cases that I've seen, the error seems to be caused
        by a corrupted segment on the playing field.. actually, I believe
        it is caused by a corrupted crossfade, to be specific.

        Whenever, I get this error, I remove the last take/edit from the
playing
        field
        (between the dialogs popping up), save, quite and restart paris.

        At this point, the problem seems to go away.

        Good luck!

Try increasing your disk cache and overview sizes in the Config menu. On
the problem project, clear the Undo buffer and delete the Markers.

I never have that problem anymore (like once every 6 months now) since I

increased my disk cache size to 128MB and my overview to 21000KB.

and......

Started to get error code: error in queing project. Error code 1879048233/70000029
every time I try to record.
 Does anyone know what this means? I did a search and found others who had
the problem, but no answers as to why.

Try resetting the record path to a new empty folder.
Or if you are on the Mac and running anything before OS 9 you may have run
 out of open files (MacOS limit). If this is the case try clearing unused
files from the audio window.

Thank you so much Aaron, John, Kerry. I saved the project to another name, rendered the tracks and all the wonkiness went away. Didn't see any wierdness in the tasks window either. You guys are great. Paris is fantastic as always, especially recently with all the good works of Mike and the boys.

Best always,
Rich

No doubt Aaron. These guys have breathed new life into the old system. I'm
way behind the curve in implementing the newest developments, but playing
catch up.

Ditto. So many things ahead of my building a new system and having time to set back up to a 4 card system. Once I do though I can't wait to pull it into integration with the Creamware system and add the house wordclock. The capabilities will be another learning curve but man... to have a current DAW editor with 1.5 mSec latency feeding Paris will absolutely rock the world. Tying digitally into another super fast DAW for Plug in access will also kick butt, I 'loathe' the latency game when demoing a set of plugs for what they do to/for a track.... enough that I boxed the UAD over it and put it on the shelf for this coming day.

Thank you Mike and Kerry.... for what you've done and what you are yet to do.

Here's what Edmund thought was the problem, just for the record.

Rich

"It sounds like you have a slightly corrupted playlist on one of the
tracks. Try disabling playback one track at a time to isolate which
one it is, then you can try changing the fades or some of the edits to
narrow it down.

If you send me the application debug messages I may be able to tell
you more."

Wow, sounds like an awesome setup. Keep us posted on the progress. Funny, I
was just thinking about getting a UAD card. Maybe I'll think twice about it
and follow you're success with the new setup. Might be over my techie
abilities though, as you know I know enough just to get by :-)
