on  
a beer budget. Bottom line: A real value, offering tremendous sonic bang  
for the buck.

**MANUFACTURER:**

DPA Microphones (formerly known as Bruel & Kjaer). Distributed by TGI North America, 300 Gage Avenue, Unit 1, Kitchner, Ontario, Canada N2M 2C8. Tel: 519-745-1158. Web: [www.dpamicrophones.com](http://www.dpamicrophones.com)

**APPLICATION:**

Miniature voice/performance microphones that also can be used for acoustic instrument miking.

**SUMMARY:**

Brings legendary B&K sound within price range of every studio.

**STRENGTHS:**

Connection adapters allow mics to be used with a variety of RF body packs

A complete backup of the project to another drive in case I screw up the  
next steps.....

Next, I choose a song and unlock all files in the Audio bin..

Then I render all active submix audio files to a new folder in the project  
folder with names that are easily recognizable which puts the rendered files  
at the top of the files shown in the Audio bin....naming the channels  
something likie AAKick, AAsnare, AAVox, etc. so that the renders show up  
with this at the top of the list of files in the audio bin and are easily  
recognizable for the next step. I also save my .ppj to this folder so I

don't delete it.

Next I back this folder up with the newly rend

ered audio files and the new  
..ppj.

Open the Audio Window and lock these newly rendered files (they are easy to find now because they are the topmost files in the audio bin)

Close the Project I'm working on.

Using \*My Computer\*, go into the project folder, highlight all \*audio\* files except the ones in the new folder I created with the new renders and manually delete all of the unused files (this way they can still be recovered if I screw up.....be sure not to delete your old .ppj's if you think you will need them....you can always import the newly rendered files into them if you have settings there that you are experimenting with)

Open the project back up and make sure all of my rendered files are still populating the editor window and the project plays back properly.

Since all of the deleted file names will still be shown in the audio window, I double check to make sure that all of my rendered files are locked before I go to the next step.....

..... in the Audio Window, I do a \*select all\* and highlight all files (since I unlocked all files in step 2 and locked the newly rendered files afterwards, at this point, all of the deleted files will be unlocked and all of the rendered files will be locked)

Now I do a delete of all files. This permanently deletes all files in the project except the ones that are locked. Now I have only the newly rendered files in the project. If I screw this up somehow by forgetting to lock a newly rendered file, I've got a back of the rendered files on another dirve.

Now I rename my channels and, if I want to, the audio files themselves.

After doing this, I defrag my audio drive.

Simple....huh?

Yeah, Cron - check in with us if you read this..

TCThat seems like that would be the thing to do. I asked him about that, and neither he nor his buddy had no idea how to make that happen. I'm not a mac guy, so I couldn't tell him how to do it. I have calls in to a couple other guys that might can shed some light on it. I'll hold off thru the weekend to see if somebody who can make the conversion gets back to me.

Thanks again,  
CL

I don't think Cron was from Dorchester. I was thinking either  
Boston proper or the north shore.  
I might be wrong though.

i keep getting an error that says "Cannot copy No Such Luck Indie Final:  
The parameter is incorrect."

any suggestions?? am i totally screwed?? i wonder if another dvd drive would read the file??

and yea... that's the title of the song... can you believe that??

JeremyYeah, we've got a pair of them in our studio at the college where I work. I'm always pleasantly surprised with how these mics sound.

I am trying to breed new life into my CAD VX2 mic.  
The tubes are original and yes they are in the microphone.  
What's in there now and original are a Sovtek 12AX7WA  
and a Phillipps 12AU7/5814A.

My goal is to enhance the top end in a musical way for lead  
vocal application. I'm looking at RFT, Sovtek and Electro Harmonix.

Any suggestions with other hi end tube choices would be great.  
Tom
