Subject: a small but positive Pulsar development
Posted by DJ on Sat, 11 Nov 2006 06:24:56 GMT

I have just tested a 30" STDM cable and it works. There was some question as to whether this length would be a problem. This will allow me to use 2 x Pulsar's in my 7 slot Magma and on in a mobo PCI slot in a similar configuration as I was doing with the RME HDSP cards. My 3rd Pulsar card will be here next week. Unless there is an issue with a 24" cable run between the 1st and 2nd Pulsar cards and only a 6" cable run between the 2nd and third card, I should be good to go.

This is good news and if it works, it will same me a lot of hassles.

;o)

DJ,
Did you ever find a substitute source for Magma flat ribbon cables? I am missing one and I need to get that box working.

Gene,

I'm looking but can't seem to find it.

Gene,

CS Electronics (949) 475-9100

Good luck

;o)
