I've been spoiled with just running my Paris rig proprietary like an ol' tape machine - so I really haven't paid any attention to ASIO stuff. What is the Paris ASIO driver used for? Routing other hardware/software into Paris - or using the Paris hardware in other programs? And, where does the driver go in Windows (xp or me) ?

TIA,

-Carl

p.s. rock on.....

Ok - so after some research, I've got the jest of it..... anyone using Paris ASIO successfully? I'm running a 4 card rig with MEC's +. Wondering if anyone's able to use the Paris hardware with Cubase or Nuendo or whatever else.

tia, again,

-Carl

Sometimes it works, but more often than not it won't and when it does, it is extremely slow, and intermittent, and will come back and bite you in the

bum, just when you think its all ok.

I was successfully using Paris hardware for monitoring Emagic
Waveburner on Mac OS 9.2.2 I just dropped the ASIO driver in
the Emagic folder

I've only tried running Samp 9 through ASIO into Paris. It gave me an error
saying I had too many cards (3). My take on it is that you can only have
one Paris card, and the other gotcha is that if you have an MEC interface,
only the built in 4in 4out is usable. All other I/O is useless with ASIO.

YMMV

I don't think the paris asio driver is viable in multi card, multi interface setups. If you have a single card, single mec setup then it would probably work reliably to monitor the outputs of a mastering app, but only then through the default mec outputs.
