Unfortunately, I don't know of any way... this perhaps is one of the many glitches that was suppose to be fixed, but never happened. You may have to rebuild the projects from scratch... Sorry... ~ Ed

I currently have 3 EDS cards and want to reduce to 2 as well as remove an 8in card (trying to pair down the parts of my system that I don't use). I have tried a couple different configurations of reducing cards, 1 card and 2 cards. I have also tried saving a new project (while three cards are installed) that deletes the third submix. I get the same error regardless of whether I open the default project or another project that works with 3

cards:

An error has occurred while reading the "Default Project" for a new project. A new empty project will be created instead. There are not enough resources.

Unhandled Exception: c0000005
At Address: 0048c425

Any suggestions, or am I stuck with 3 cards in my system if I want to read all my old project files.

Thanks in advance,
John

Have you deleted or renamed the default project in your Paris directory?

Jeff

No. However, the main issue is I cannot open any of my projects i.e. if I start PARIS via clicking on any project, I get the same error.

John,

Always start from your default project. Resave your default project with =
the new=20
hardware configuration. That should smooth things out. Start from =
there then=20
open older projects.

I hope this works. It does for me when adding hardware to the system.

Good luck,

Tom

Thanks Jeff and Tom.

Deleting the default project allowed PARIS to launch and from there I could get into my projects.
