>2K was never immune to any of the other 300 virii to be released on the net per month in the last 5 years, not to specifically mention any of the notoriously malicious ones. Readyhosting never went down and I've never seen them off the air at any time in 4 years. I'm not certain they are still 2k servers.... maybe newer now. Check the site.

By the way, and completely OT: cool tip for windows users: type the unique portion of any known url in the IE url line. Example, >rodlincoln< then simple hit CTRL+ENTER and IE will add >www.< to the front and >.com< to the end and send the query. FYI.

Martin Harrington  
www.lendaneer-sound.com I used readyhosting for a couple of years - however, these days, I believe that GoDaddy has the best bang for the buck. 500mb for around \$38/year. You can also add 100mb to that for \$10 more.

www.godaddy.com

g at 2 gig of storage.  
Yousendit is great for that, and totally free, but the upload times are pretty  
slow and it doesn't always work. Hence the reason for my question.  
Rod

>yeah, I was sort of thinking this was as well, I work wiht mostly garage or  
Clash ere style punk bands, Big low end does not seem to be there on some  
of the stuff.

Now When I produce this particular bands next CD, I am going to make sure

there is a tight kick and bass team, not a mush of missed hits ghost notes and flabby bass. Then I think, I can put some of the bottom back,

As it is now, It seems to make more of a mess.

Ah the polishing goes on.
