Hey D.,
Reseat your cables? I'd start there.
They can get iffy after sitting idle for
months/years in the comp.

It's probably one cable that isn't allowing the
loop around.

You know, try the simplest fix first.
Tom

I know this happens to me if I forget to run the task assignment manager before
launching PARIS. Could hyper threading or a dual core CPU been re-activated?
 This would cause the error.

Let us know how the troubleshooting goes.

Thanks to both !
I will try all althoiugh I have resetted cables several times but who knows...
Whats task assignment manager that you run every time before running Paris
??
Thanks
Dimitrios

Could it be a symptopm of an eds card going dead ??
Thanks
Dimitrios

Hi Dimitrios,

If you go to ensoniq.ca, there is a word document with installation instructions
and paris tips. In there is a description of how to get PARIS to run on
a dual cpu/hyperthreading setup under xp. The task assignment utility is
part of that.

As for your error message, could windows have, for some reason, re-enumerated
your cards? Do all of your cards have interfaces connected to them? If
you check the paris.cfg file in your paris pro folder, there is a line that
reads:

MasterOutputCard=0

You could try changing this to "3" if you have 4 cards, or "4" if you have 5 cards, etc.

let me know how it goes.

All the best!

Mike

Dear Mike,
Thank you for your tips !
I hve found the workaround !
As Tom said I have taken a look at the cables and I found that on all three
!! there was a pin that was bent close to the next pin almost touching before
attching to eds cards !
I made sure that all pins were far away in beetween them and all went smooth.
I don't know if I caused any malfunction though.
What is happening last few days is that ADAT card on Mec 3 passes signal
with pops and clicks as it doesn't have proper wordclocking , although clocked
for external mytek wordclock machine.
It was perfect but after a new installation on second PC with Pulsar cards
this doesn't seem to go away.
In case that I will not solve this I will have to drop the adat card from
that Mec and keep the other 4 cards (two on each other mecs) which work alright
except for channels 5 and 6 on two of these cards !
Maybe I will make a Me Paris install and see if this will fix that problem
before I uninstall the adat card.
Thanks !!!
Dimitrios
