years that worked correctly or was sonically worth using in the studio. It
is called an Ultramatch Pro and I'm using it as a D/A converter right now.
It says it does about 33822876 things. I don't know about that, but it
definitely works as a D/A converter as long as it isn't locked to my house
clock. Luckily it's locked to the AES output of my Mytek converter which is
feeding clock to the rest of my studio so in this case, it's a happy
accident. It doesn't do exactly what I want (I'd have to get two of them to
actually accomplish something done the *normal* way), but it's an acceptable
kludge for the moment. Maybe you'll get lucky. I will say this.....their
tech support personnel are all very nice folks. I probably spoke to all of
them when my little fader control thingie went south and tried to take my
Cubase rig along with it.

The D/A converter sounds good but I've got th

Hi DJ,

You have definitely had terrible experiences with Behringer stuff, but mine has been the opposite. I've had a Mic-502 dual mic pre for nearly 10 years without any trouble at all. I've had an original composer since they were first released - no trouble.

I recently added an ADA8000 and one of their single rack space line mixers - both no problem.

I've done a whole bunch of live recording with the ADA8000 and the line mixer strapped to an ADAT, and the quality has been fabulous.

There was a review of the ADA8000 in which someone strapped the outputs to the inputs, cranked the gain to 100%, and then claimed that the whole unit was too noisy, among other things. In normal use for me, it has been perfect.

The mic pres sound really good - not all bright and tinny like Macky or Presonus pres, which I hate. The line inputs are so good that they actually sound better with a guitar plugged directly into them than the DIs we had on stage. The thing rocks.

It's kind of funny, but I've found as I get better at this recording gig, I'm less obsessed with gear than I used to be. Not that gear just can't be fun or lead to a better end product, but I used to "chase a sound" thinking that it was the gear that was 100% responsible. It clearly isn't. The choice of mic placement, eq use, reverb type, and compression settings are the main drivers of good sound. It's not that the gear doesn't matter, but I've found that if you use your ears instead of reading price tags, you get way better results for way less money.

Having said that, I'm moving towards using external, analog compressors because I'm just not satisfied with the DX stuff. But, I won't be buying any \$2000 compressors or a UAD 1. The composer sounds awesome, and you can get used ones for \$50. I've also heard that the old Alesis compressors can sound really good if you replace the power supply with something that can actually handle the unit.

And, the DP4's "early reflections" algo sounds wonderful, too. I have a lexicon MPX1, but I hardly ever use it. The DP4 gets used on everything.

The C3000 I bought 8 years ago is one of my favourite mics. It goes for \$150 used. Yes, it's a little noisy, and it needs more EQ than the C1 to work on acoustic guitar, but sounds 1000 times better than a C1 when you know what to do with it.

We are so lucky to live in a time when great stuff is dirt cheap. Why fight

it?

All the best,
Mike

Pro seems to be OK and hopefully I've finally found something
by Behringer that works.

I have no problem using inexpensive gear. I've got inexpensive Rode, Oktava
and Studio projects mics that sound great. I also have a pair of RNC's that
are very useful. Overall though, I've found that with few exceptions, I tend
to get what I pay for as far as \$\$\$ vs quality goes.

I've got some Chinese SE Electronics mics here on loan right now that sound
absolutely great.....but they're not really super inexpensive
(unfortunately). The Gemini is definitely in the big leagues. The verdict is

out on the Titan. I'm liking it on some stuff, not so much on other stuff, but this is the case with lots of high-end mics as well. The build quality on these is not cheap at all. They are much less expensive than some of the mics that they are being compared to so the bang for the buck factor is pretty substantial.

Not a gear snob.....just been bitten a few times by Behringer. I have also heard great things about the Behringer 8000 unit.

My problem here is that I live in a cave in the wilderness and have to trudge 10 miles barefooted through 20' of snow and fight off packs of ravenous wolves to get to my mailbox and I have to order everything online. There is no brick and mortar store that carries this stuff within 250 miles of me so when I wait all week for a piece of gear that I need and it arrives, doesn't work properly and I have to spend lots of time troubleshooting it to determine why I can't just hook it up and expect it to work, suddenly I've wasted lots of my time and so the money I've saved, wasn't saved at all and I could have spent a little more and gotten something with good QC and some expectaion of reliability.

;o)
Deej

 >Hi DJ,

Man, that really sucks having that kind of luck with Behringer gear given how much of a hassle it is for you to return it. And that fire is scary.

I make a special effort to never leave the house with my rack left on since reading your post about that. I would feel the same way as you do if I'd had those experiences.

To a point, I agree that you usually get what you pay for. I have a Neumann 103, and I would never even think of using anything else on vocals. It's worth every penny. But, it completely sucks on acoustic guitar.

The DP/4 was freakin expensive in its day, too. So, while a DP/2 is now a killer deal, it was high end stuff at the time.

I should qualify my enthusiasm for the C3000. I had to mod it slightly.

It comes with a built in pop filter, which is just a coating that is sprayed on to the diaphragm. I peeled it off, and things opened up a lot.

I live 30 minutes outside of Toronto, so I've got a much easier time returning things that don't work or selling things I don't like. I just sold my C1 and an MPX500 - good riddans to both. Anybody want to buy a PCM60?

I feel that the gear industry takes advantage of people who are learning by hyping gear as necessary for a great sound when older, cheaper gear will do just or almost as well. A while back, I decided not to spend any more money on gear unless I was 100% sure that the problem was my gear and not how I was using it. My skills have improved immensely since then. I suspect that you are actually past that and pushing beyond. We're probably just at different stages.

Having said all that, I would love to check out the compressors in a UAD1.

I just don't want to pay for them. :)

All the best,

Mike

The fact that by paying this \$ they increased the chance of any of us having to hear things like Celine Dion is certainly damaging to us. They should do time in addition to paying the money.so

the ad8000 is one of those exceptions from behri ?

I've had nothing but good luck with Behringer products - which may just be good luck - but the ADA8000 has been great for me. I'm sure that you won't be disappointed.

All the best,

Mike

Did anyone watch "Father of the Pride" when it was on? At first I thought it would be lame, but it was really sharp, really funny, really full of inside entertainment and Vegas humor.

In one episode, Larry (the father, voiced by John Goodman) is standing on a bluff overlooking Highway 15 leaving Vegas with another animal. They're trying to figure out how to get across, since traffic is extra heavy.

Larry: "Look at all that traffic. Oh, it's 10:30. That means a show just got out, and it's probably Celine Dion, which means that they'll all be tired and cranky."

I love lines like that.

Unfortunately I still haven't heard back from Chuck on the No Limit plug, which I paid for using pay pal last Monday. Does anyone have an alternative e-mail address / contact details? Alternatively - I'm not sure how copy protection works here - perhaps someone could e-mail me No Limit. I have paid for it, and have a copy of the Pay Pal receipt... I just don't have the plug in. Thanks for any assistance.

>Daniell wanna keyboard!

Im a guitarist, never owned a keyboard, cant play one and dont really plan on learning how to play. Im just looking to get something I can tinker with and get some cool sounds out of. Either for weird effects or just adding ambience or filler type stuff to tracks. Im not really into messing around with soft synths so whatever I get should come with alot of sounds built in though the ability to access external sounds would be a plus. My budget is around \$400 or less.

What would you guys suggest to fit my needs?

Thanks in advance!Find a cheapo controller and a used Roland JV-1010 half rack. Those make pretty decent sounds, are expandable and should be right there in your price range.

> I've had quite good luck with both of my ADA8000 units. I bought one thinking "cheap utility preamps" and liked it enough to pick up a second one. I agree, Behr has some real serious quality control issues, but generally if you get a good one, it's a good one. Not stellar, mind you, but I digress at this point. I had a 2442 mixer that was a flaming pile of crap on the other hand... muting channels would not only change whether I had a 60Hz hum or not, it would change the volume and pitch of it depending on what channels saw the mute action. Avoid that mixer, IMO.

>Here's some pics and writeups on a couple of the bars we went to the other night.

This one is 303's... situated in between the "Northcote Social Club", a much talked about band venue that's suddenly become very popular, and a "Lamb's" kebab shop... ;o)

<http://www.melbournepubs.com/search?l=en&c=S21&q=303 &se=SE1>

And just a short walk down the road is the Wesley Anne, and apparently an old church converted into a bar. There's a beer garden out the back, and two rooms, both of which look a bit like the one pictured, one with bands and the other with the bar in it (shown)...

<http://www.melbournepubs.com/v/667/Wesley-Anne.html>

Cheers,

Kim."Aaron Allen" <nospam@not_here.dude> wrote:

I've heard good things about those for the money, and it's probably well suited in that you get a selection of good sounds from a company very experienced in the field, and it will be full of useful presets rather than having to mess with programming to get the sounds you want.

Would probably be easier though if you could find an actual keyboard "all in one" solution though I guess.

Cheers,

Kim.I vote for Northcote, because you said you can get a house there, and therefore have a slightly more proper recording environment.

Plus that 2nd place looks like a good spot to get laid as a result of going to lol

what about one of those newer mini-Alesis thangs like the
Micron... do those sound any good for what he's talking about?
I noticed they cruise in around \$399 street (new).

Neil"Darebin Community Legal Centre"

Always good to know where that is!

Yeh, I'm fast settling on Northcote, which is a shame because it means no
beach, but things exactly like that are very relavant. If I get a house I
will have far better chance of getting away with some noise, far better chance
of getting some quiet, and far more space...

...I think this is starting to answer itself really. ;o)

>Plus that 2nd place looks like a good spot to get laid as a
>result of going to lol

Hehe, well yes, didn't I mention that in my rundown? Must have slipped my
mind... ;o)

It's definitely hit or miss with Behringer. I had a 2442 that never
gave me problems. I'm now running a 32 cheannel Eurorack that will
consistently lock up if on for over eight hours. All it takes to
address it is a power cycle but...QC seems to be elusive to them

So this would be St. Mattress cathedral?There are definatly some mecs with noisy fans and some with quiet ones. I

always thought the mec fans were really quiet but have seen some posts about problems with noise.

Yesterday, I had a power switch on my mec 2 decide to go bye-bye. I have a spare mec for just such an occasion. I pulled the mec and switched out 5 in/out/adat modules to the spare mec. (which I'd to this point never used). I switched it on and was rewarded with a hi-pitched wine (about the same as a not so quiet athlon heatsink fan). crap!!!!!! so this is what people talk about. There are definatly different fans used.

Luckily, the fan is pretty easy to replace....just pull the side off the mec that has the fan. I was able to take the fan out of the mec with the bum power switch and swap it out with the noisy one. All is good now. This of course happened when I'm swamped and running behind...at least there were no clients here at the time.

The quiet fan is made bu "Panflow" and the noisy one is made by "Jamicon"

Now I just need to pick up a nice panflow and find a power switch to get my other mec up to spec.

:)

Rodl had an Ensoniq MR76 for years. Cool keyboard. Lots of good sounds. The midi implementation with computers was a nightmare because it was structured around using it's own proprietary sequencer, but if you're just wanting something with lots of cool sounds, the best drum machine I've heard in a long while and 76 weighted keys, the MR76 (or ZR 76) is a cool tool. Also, the MR Rack rocks also. I've got one here that I'm using with a Keystation 88 controller. Much more computer friendly this way.

Interesting,

I'll have to check mine, It makes virtually no noise at all.

dbInteresting session last night. Very talented players. Showed up fresh and well rehearsed. I had spent a fair amount of time setting up for this with two mic'ed bass amps and a bass DI (using a Little Labs STD and a Radial Engineering JX2 Switchbone) and various mics set up for upright bass, mandolin, guitar, vocals and dobro. All in all there were 9 active mics and within 2 hours we had the better part of 6 songs in the can.

Then a bunch of their *friends* came by and so it was break time. When they got in from the break they were so zoned that we spent the next 3 hours trying to get 2 songs properly tracked. Never happened. Sloppy crap that they will never be happy with, so their little *break* cost them a fair chunk of change. My billing doesn't stop for this, but there was *grumbling* about it because they weren't happy with how the second half of the session went.

If I hear any more of this *grumbling* shit tonight, I'm going to throw them out on their collective asses.

DJI am totally with you on this one... no sympathy at all for them. I sat in the stu

>>Hi Chas,

It's an old Roland chorus (rackmounted) with excellent stereo imaging.

Mine died a few years ago. Wow... like six... time flies! I had it for a loooong time. It can be used subtly or obviously in a variety of ways - to add some space or as an effect. Mainly used it on guitars. This piece is not the same as the "Dimension ____ " stomp box.

It will be interesting to hear UAD's emulation. I feel they did very well with the plate.

Peace - Don

>>>I have just read the book "HitMen: Power Brokers And Fast Money Inside The Music Business "

http://www.musicroom.com/se/ID_No/045721/details.html

Kind of funny to be in the middle of that book when the 'Payola' Settlement happened.

http://www.billboard.com/bb/biz/newsroom/legal_management/article_display.jsp?vnu_content_id=1000991014

Is this book considered "the thruth" about the buisness or...?
Any netforums or something that discusses it?

best

do somewhat tight MIDI timing as long as it does nothin else.
As soon as the system gets loaded down with say...dxis, you're doomed.
PCI cards are twice as good as USB with the system loaded down, but are still
nowhere near good enough (PCI 10ms drift, USB 2

0 ms drift)

Windows 98/Me with WDM MIDI drivers for USB/PCI/ or ISA Midi ports - same as Windows XP. Not good enough at all if the PC is doing anything else.

Windows 98/ME with 16 bit drivers - awesome. less than 1ms drift. Unfortunately, 16 bit drivers come with ISA cards only. It's not the ISA bus that brings the magic, it's the 16 bit drivers.

I hope this helps.

I. I have found that it helps me especially when editing as one false editing move sometimes bales me out of Paris and I lose everything. Autosave helps that a bunch.

Randy Brown

>Oh,

So I guess I brought some old "fresh" idea around...

With wires you could assign the the out wire to an effect return wire in to save on Paris channels.

I also tried the wires with drumtracks.

You could send all drumtracks to the same wire channel (i.e. 0) and then open a new Paris channel that hass all drums on it
