Did some folks here recommend Bit Defender as the best in class? It wants me
to uninstall Norton before installing Bit Defender. Good move?

Also, if so, which package? Satndard?

Thanks!
Jimmy

Personally I suggest Debian.

I'm a Nod32 user, IMHO nothing comes close to it.

Definitely, dump norton first. You do not want two A/V's running at the =
same time.=20

Of my own personal machines, I use AVG free and of the half a dozen or =
so constantly connected to the net and running machines I have, how many =
viruses (including my personal 2003 MS server) have gotten through in =
the last 5+ years?=20

                    ZERO

Them's pretty good odds dude. AVG-Free has a nag message, but these are =
not corporate machines and I could care less that emails sent via =
outlook/outlook express have a "I use AVG" message at the bottom of =
them. It is otherwise completely non annoying.=20

My spyware is Windows Defender Beta II currently... again, no problems.=20
Zone Alarm has done what it's supposed to for years. I do not like the =
included window firewall, shut it off. Config ZA, don't just accept =
defaults. I also sit behind a hardware firewall/router. Anyone in their =
right mind that knows would, though.
For spam blocking, it's been a crap shoot, and no one has been 100% on =
that one. Can't recommend anything there as better than say 60% area. =
Outlook 2003 has some things built in, but nothing is perfect. Spam is =
definitely a layered defense item. Bug the heck out of your ISP/mail =
service to filter ahead for you. sign up for a hotmail account, and send =
any 'unknown' sign ups, internet stuff and otherwise guilty until proven =
innocent sources to that email address.=20

Never used Bit Defender, no opinions on it. Ditto on NOD32/ESET. Bottom =

line is AVG never ever let me down, nor a client's home machine, so I'm =
loathe to change a working plan of defense. I think Norton sucks, and I =
think McAfee sucks just slightly less, FWIW. Trend has been pretty =
strong from what I've seen in the corporate world. I use housecall to =
clear up messes NAI and Symantec left behind on infected machines, and =
this has been pretty consistent this entire year.=20

On another related topic that is for sure coming... boy, can I wait for =
the virus clowns to start attacking and infecting our phones and PDA's. =
As popular as the iPOD is, I'm just amazed some smart aleck kid in =
Taiwan hasn't found a way to infect it and pooch the library/licensing =
yet, either.=20
One thing at a time Aaron, one thing at a time.

My cousin had her (non-apple) MP3 player infected with a regular PC virus
I believe. Had to reformat the drive and start again.

Cheers,
Kim.

Aaron,

You're saying you don't like the Windows XP firewall, but to use the =
Zone Alarm?

Thanks,
Jimmy

"Aaron Allen" <nospam@not_here.dude> wrote in message =
news:44a0c407@linux...
Definitely, dump norton first. You do not want two A/V's running =
at the same time.=20

Of my own personal machines, I use AVG free and of the half a =
dozen or so constantly connected to the net and running machines I have, =
how many viruses (including my personal 2003 MS server) have gotten =
through in the last 5+ years?=20

ZERO

Them's pretty good odds dude. AVG-Free has a nag message, but =
these are not corporate machines and I could care less that emails sent =
via outlook/outlook express have a "I use AVG" message at the bottom of =
them. It is otherwise completely non annoying.=20

My spyware is Windows Defender Beta II currently... again, no =
problems.=20
Zone Alarm has done what it's supposed to for years. I do not like =
the included window firewall, shut it off. Config ZA, don't just accept =
defaults. I also sit behind a hardware firewall/router. Anyone in their =
right mind that knows would, though.
For spam blocking, it's been a crap shoot, and no one has been =
100% on that one. Can't recommend anything there as better than say 60% =
area. Outlook 2003 has some things built in, but nothing is perfect. =
Spam is definitely a layered defense item. Bug the heck out of your =
ISP/mail service to filter ahead for you. sign up for a hotmail account, =
and send any 'unknown' sign ups, internet stuff and otherwise guilty =
until proven innocent sources to that email address.=20

Never used Bit Defender, no opinions on it. Ditto on NOD32/ESET. =
Bottom line is AVG never ever let me down, nor a client's home machine, =
so I'm loathe to change a working plan of defense. I think Norton sucks, =
and I think McAfee sucks just slightly less, FWIW. Trend has been pretty =
strong from what I've seen in the corporate world. I use housecall to =
clear up messes NAI and Symantec left behind on infected machines, and =
this has been pretty consistent this entire year.=20

On another related topic that is for sure coming... boy, can I =

wait for the virus clowns to start attacking and infecting our phones =
and PDA's. As popular as the iPOD is, I'm just amazed some smart aleck =
kid in Taiwan hasn't found a way to infect it and pooch the =
library/licensing yet, either.=20
    One thing at a time Aaron, one thing at a time.

Sort of, and I see your concerns... basically, MS bought out a 3rd party =
app (GIANT was the beta I product) and built on it. Here's the deal =
though. The ZoneAlarm vs. Windows built in firewal app intended to block =
things out.... now do you REALLY think that MS is blocking themselves in =
their own firewall?=20

Of the spyware stuff.... my belief is that MS is going to spy on you if =
you're on the net. Period. What they won't do is sell your private data =
off on the black market or hang/hose your CPU time up with replicating. =
They'll have back doors, IMHO, that nobody else save the govt will be =
keen to. In a corporate, twisted kind of way I'm actually ok with this. =
That very thing might be the ticket to nailing some terrorists. Vista, =
after all the hoopla has died, will be little if any different in this =
respect. If you want a scary bedtime story, start reading all your =
EULAs. This goes for most EULAs (including Apple) outside of MS, but not =
all of course. There are freeware alternatives, but that a completely =
different bucket of worms. Bottom line in those EULAs is: You own =
nothing, you are allowed to USE software.=20

I'll pick my battles, and I can attest that the 100ish machines I have =
on beta II Windows Defender have zero fail/infections found by other =
means rates. In corporate security, it's about layers of protection so I =
prefer scans of the scanner from time to time to check the henhouse. =
Zero fails. That's not something I take lightly and it's about what =
quality of job is getting done, not as much as who's doing it.=20
FWIW.

Rock on. Good help here.

Frankly, I don't have a problem with Billy Gates anymore. I trust him =
more than Bush by a long shot. Hmmmmm...Gates for =
President.....hmmmm.....

Anyway, XP has been solid for me, and I use a variety of trawlers and =
crawlers to check for malware: Spyware Doctor and Blaster, Ad-Aware, =
Spybot Search and Destroy, etc.

Speaking of malware, does Windows Defender cover Trojans? I've been =

using TrojanHunter for a while now, but it seems overly proactive =
sometimes with its self-appointed moves and such...

Jimmy

"and I use a variety of trawlers and crawlers to check for malware:=20
Spyware Doctor and Blaster, Ad-Aware, Spybot Search and Destroy, etc."

http://www.ewido.net/en/download/ Try the free version of ewido.=20
Works great and very few nags so far.

I also use some of the above and would include a recommendation:=20
to http://www.emsisoft.com/en/software/free/ a-squared free version..

I have been very pleased with Firefox for over a year. =20
Only the occasional tracking cookie to clean up now and again.

Regards,

El Miguel

  Rock on. Good help here.

  Frankly, I don't have a problem with Billy Gates anymore. I trust him =
more than Bush by a long shot. Hmmmmm...Gates for =
President.....hmmmm.....

  Anyway, XP has been solid for me, and I use a variety of trawlers and =
crawlers to check for malware: Spyware Doctor and Blaster, Ad-Aware, =
Spybot Search and Destroy, etc.

  Speaking of malware, does Windows Defender cover Trojans? I've been =
using TrojanHunter for a while now, but it seems overly proactive =
sometimes with its self-appointed moves and such...

  Jimmy

"Aaron Allen" <nospam@not_here.dude> wrote in message =
news:44a3092b@linux...
   Sort of, and I see your concerns... basically, MS bought out a 3rd =
party app (GIANT was the beta I product) and built on it. Here's the =
deal though. The ZoneAlarm vs. Windows built in firewall app intended to =
block things out.... now do you REALLY think that MS is blocking =
themselves in their own firewall?=20

   Of the spyware stuff.... my belief is that MS is going to spy on you =
if you're on the net. Period. What they won't do is sell your private =
data off on the black market or hang/hose your CPU time up with =
replicating. They'll have back doors, IMHO, that nobody else save the =
govt will be keen to. In a corporate, twisted kind of way I'm actually =
ok with this. That very thing might be the ticket to nailing some =
terrorists. Vista, after all the hoopla has died, will be little if any =
different in this respect. If you want a scary bedtime story, start =
reading all your EULAs. This goes for most EULAs (including Apple) =
outside of MS, but not all of course. There are freeware alternatives, =
but that a completely different bucket of worms. Bottom line in those =
EULAs is: You own nothing, you are allowed to USE software.=20

   I'll pick my battles, and I can attest that the 100ish machines I =
have on beta II Windows Defender have zero fail/infections found by =
other means rates. In corporate security, it's about layers of =
protection so I prefer scans of the scanner from time to time to check =
the henhouse. Zero fails. That's not something I take lightly and it's =
about what quality of job is getting done, not as much as who's doing =
it.=20
   FWIW.

Definitely, dump norton first. You do not want two A/V's =
running at the same time.=20

Of my own personal machines, I use AVG free and of the half =
a dozen or so constantly connected to the net and running machines I =
have, how many viruses (including my personal 2003 MS server) have =
gotten through in the last 5+ years?=20

ZERO

Them's pretty good odds dude. AVG-Free has a nag message, =
but these are not corporate machines and I could care less that emails =
sent via outlook/outlook express have a "I use AVG" message at the =
bottom of them. It is otherwise completely non annoying.=20

My spyware is Windows Defender Beta II currently... again, =
no problems.=20
Zone Alarm has done what it's supposed to for years. I do =
not like the included window firewall, shut it off. Config ZA, don't =
just accept defaults. I also sit behind a hardware firewall/router. =
Anyone in their right mind that knows would, though.
For spam blocking, it's been a crap shoot, and no one has =
been 100% on that one. Can't recommend anything there as better than say =
60% area. Outlook 2003 has some things built in, but nothing is perfect. =
Spam is definitely a layered defense item. Bug the heck out of your =
ISP/mail service to filter ahead for you. sign up for a hotmail account, =
and send any 'unknown' sign ups, internet stuff and otherwise guilty =
until proven innocent sources to that email address.=20

Never used Bit Defender, no opinions on it. Ditto on =
NOD32/ESET. Bottom line is AVG never ever let me down, nor a client's =
home machine, so I'm loathe to change a working plan of defense. I think =
Norton sucks, and I think McAfee sucks just slightly less, FWIW. Trend =
has been pretty strong from what I've seen in the corporate world. I use =
housecall to clear up messes NAI and Symantec left behind on infected =
machines, and this has been pretty consistent this entire year.=20

On another related topic that is for sure coming... boy, can =
I wait for the virus clowns to start attacking and infecting our phones =
and PDA's. As popular as the iPOD is, I'm just amazed some smart aleck =
kid in Taiwan hasn't found a way to infect it and pooch the =
library/licensing yet, either.=20

One thing at a time Aaron, one thing at a time.

    Rock on. Good help here.

    Frankly, I don't have a problem with Billy Gates anymore. I trust =
him more than Bush by a long shot. Hmmmmm...Gates for =
President.....hmmmm.....

Anyway, XP has been solid for me, and I use a variety of trawlers =
and crawlers to check for malware: Spyware Doctor and Blaster, Ad-Aware, =
Spybot Search and Destroy, etc.

Speaking of malware, does Windows Defender cover Trojans? I've been =
using TrojanHunter for a while now, but it seems overly proactive =
sometimes with its self-appointed moves and such...

Jimmy

"Aaron Allen" <nospam@not_here.dude> wrote in message =
news:44a3092b@linux...
Sort of, and I see your concerns... basically, MS bought out a 3rd =
party app (GIANT was the beta I product) and built on it. Here's the =
deal though. The ZoneAlarm vs. Windows built in firewall app intended to =
block things out.... now do you REALLY think that MS is blocking =
themselves in their own firewall?=20

Of the spyware stuff.... my belief is that MS is going to spy on =
you if you're on the net. Period. What they won't do is sell your =
private data off on the black market or hang/hose your CPU time up with =
replicating. They'll have back doors, IMHO, that nobody else save the =
govt will be keen to. In a corporate, twisted kind of way I'm actually =
ok with this. That very thing might be the ticket to nailing some =
terrorists. Vista, after all the hoopla has died, will be little if any =
different in this respect. If you want a scary bedtime story, start =
reading all your EULAS. This goes for most EULAS (including Apple) =
outside of MS, but not all of course. There are freeware alternatives, =
but that a completely different bucket of worms. Bottom line in those =
EULAS is: You own nothing, you are allowed to USE software.=20

I'll pick my battles, and I can attest that the 100ish machines I =
have on beta II Windows Defender have zero fail/infections found by =
other means rates. In corporate security, it's about layers of =
protection so I prefer scans of the scanner from time to time to check =
the henhouse. Zero fails. That's not something I take lightly and it's =
about what quality of job is getting done, not as much as who's doing =
it.=20
FWIW.

AA
"uptown jimmy" <johnson314@bellsouth.net> wrote in message =

news:44a1c8c2@linux...
Aaron,

You're saying you don't like the Windows XP firewall, but to =
use the Zone Alarm?

Thanks,
Jimmy

"Aaron Allen" <nospam@not_here.dude> wrote in message =
news:44a0c407@linux...
Definitely, dump norton first. You do not want two A/V's =
running at the same time.=20

Of my own personal machines, I use AVG free and of the =
half a dozen or so constantly connected to the net and running machines =
I have, how many viruses (including my personal 2003 MS server) have =
gotten through in the last 5+ years?=20

ZERO

Them's pretty good odds dude. AVG-Free has a nag message, =
but these are not corporate machines and I could care less that emails =
sent via outlook/outlook express have a "I use AVG" message at the =
bottom of them. It is otherwise completely non annoying.=20

My spyware is Windows Defender Beta II currently... again, =
no problems.=20
Zone Alarm has done what it's supposed to for years. I do =
not like the included window firewall, shut it off. Config ZA, don't =
just accept defaults. I also sit behind a hardware firewall/router. =
Anyone in their right mind that knows would, though.
For spam blocking, it's been a crap shoot, and no one has =
been 100% on that one. Can't recommend anything there as better than say =
60% area. Outlook 2003 has some things built in, but nothing is perfect. =
Spam is definitely a layered defense item. Bug the heck out of your =
ISP/mail service to filter ahead for you. sign up for a hotmail account, =
and send any 'unknown' sign ups, internet stuff and otherwise guilty =
until proven innocent sources to that email address.=20

Never used Bit Defender, no opinions on it. Ditto on =
NOD32/ESET. Bottom line is AVG never ever let me down, nor a client's =
home machine, so I'm loathe to change a working plan of defense. I think =

Norton sucks, and I think McAfee sucks just slightly less, FWIW. Trend =
has been pretty strong from what I've seen in the corporate world. I use =

        =
size=3D2>
            =
               &=
 nbsp;   & nbsp; =20
        <U><STRONG>ZERO</STRONG></U></FONT></DIV>
        <DIV><STRONG><U><FONT face=3DArial=20
        size=3D2></FONT></U></STRONG> </DIV>
        <DIV><FONT face=3DArial size=3D2>Them's pretty good odds =
dude.=20
        AVG-Free has a nag message, but these are not corporate =
machines=20
        and I could care less that emails sent via outlook/outlook =
express=20
        have a "I use AVG" message at the bottom of them. It =
is=20
        otherwise completely non annoying. </FONT></DIV>
        <DIV><FONT face=3DArial size=3D2></FONT> </DIV>

<DIV><FONT face=3DArial size=3D2>My spyware is Windows =
Defender Beta=20

II currently... again, no problems. </FONT></DIV>

<DIV><FONT face=3DArial size=3D2>Zone Alarm has done what =
it's=20

supposed to for years. I do not like the included window =
firewall,=20

shut it off. Config ZA, don't just accept defaults. I also =
sit=20

behind a hardware firewall/router. Anyone in their right =
mind that=20

knows would, though.</FONT></DIV>

<DIV><FONT face=3DArial size=3D2>For spam blocking, it's =
been a crap=20

shoot, and no one has been 100% on that one. Can't =
recommend=20

anything there as better than say 60% area. Outlook 2003 =
has some=20

things built in, but nothing is perfect. Spam is =
definitely a=20

layered defense item. Bug the heck out of your ISP/mail =
service to=20

filter ahead for you. sign up for a hotmail account, and =
send any=20

'unknown' sign ups, internet stuff and otherwise guilty =
until=20

proven innocent sources to that email address. =
</FONT></DIV>

<DIV><FONT face=3DArial size=3D2></FONT> </DIV>

<DIV><FONT face=3DArial size=3D2>Never used Bit Defender, =
no opinions=20

on it. Ditto on NOD32/ESET. Bottom line is AVG never ever =
let me=20

down, nor a client's home machine, so I'm loathe to change =
a=20

working plan of defense. I think Norton sucks, and I think =
McAfee=20

sucks just slightly less, FWIW. Trend has been pretty =
strong from=20

what I've seen in the corporate world. I use housecall to =
clear up=20

messes NAI and Symantec left behind on infected machines, =
and this=20

has been pretty consistent this entire year. </FONT></DIV>

<DIV><FONT face=3DArial size=3D2></FONT> </DIV>

<DIV><FONT face=3DArial size=3D2>On another related topic =
that is for=20

sure coming... boy, can I wait for the virus clowns to =

start=20
        attacking and infecting our phones and PDA's. As =
popular as=20
        the iPOD is, I'm just amazed some smart aleck kid in =
Taiwan hasn't=20
        found a way to infect it and pooch the library/licensing =
yet,=20
        either. </FONT></DIV>
        <DIV><FONT face=3DArial size=3D2>One thing at a time =
Aaron, one thing=20
        at a time.</FONT></DIV>
        <DIV><FONT face=3DArial size=3D2></FONT> </DIV>
        <DIV><FONT face=3DArial size=3D2>AA</FONT></DIV>
        <DIV><FONT face=3DArial size=3D2></FONT> </DIV>
        <DIV>
<FONT face=3DArial size=3D2>> "uptown jimmy" =
