Subject: No Meter Activity with Kjaerhus Gold Plugins
Posted by Simon on Sun, 14 May 2006 21:10:16 GMT

Hi,

I am pretty new to Paris, using it for about a year now and Ilove it. When
I had problems or questions, I always found an answer in
the NG archives. But this time I really need your advice because
I'm out of ideas.

I've got this Gold Bundle from Kjaerhus and it works and sounds
great with Wavelab. But on Paris the meters don't work and the
parameters go back to default every time I pop it up during a
session. Sonically it works: I can do changes which I can hear,
but the next time I pop it up, all parameters are back to zero.
Sonically the parameters are not affected, I still hear the same
sound as I adjusted, but graphically all jumps back to default,
and still no meter activity.

Does anybody has experience with this behavior or is someone
successfully using these plugins with Paris?

I hope somebody can understand my problem, my english lessons are
pretty far away...
I'm running Paris 3.0 under Win98.

Thanks Simon

You probably need a direct X wrapper. I know this problem existed for UAD
users also, and the wrapper resolved it in that case.

FXpansion is a good place to start. VST-DX Adapter versions 3 and 3.3 are
known to work well with Paris.. I think version 4 was a bust IIRC. You may
have to contact the developer directly to see about buying the older
version. I believe his name/spelling is Angus Hewlett, though I believe he
sold or licensed out the rights of use on it to Cakewalk last I'd heard.

You might find useful info here:
 http://www.em411.com/show/interview/26/1/angus_f_hewlett_of_ fxpansion.html\
If not, google on, I'm sure it's out there how to contact Angus. He's a cool
dude. You might get through at info@fxpansion.com as well.

I have attached the last known-to-work FXPansion VST.DX wrapper. This should
allow you to use VST plugins normally.

Thanks a lot so far! I think this is the solution, I will check it out soon.

I searched the archives of the NG about FXPansion and there was talking
about latency with VST Wrappers. Do I now have to deal with latency
compensation when using the Kjaerhus Plugins? They claim themself to be zero
latency. And if yes, how much is the latency?

Thanks in advance!

Simon

I don't knopw what the latency would be, but Dimitrios probably does.

Dimitrios knows everything.

;o)

FXpansion induces no latency on it's own. If the plug has no latency, fxpansion
will not add any.
