Darwin moves officially from comatose and brain damaged to dead

http://ezine.daemonnews.org/200602/apple.html

Gotta love those BSD licenses, I just hop the FSF keeps on their ass about
GPL'd code.

Compare this to IBM's Eclipse project (www.eclipse.org) which went from 'nobody
would touch it' to 'moving along really, really nicely' once the code ownership/copyright
was put outside of IBM (in a non-profit foundation) and released under a
truly free license.
