Subject: Tyan mobo with Antec PS?

Well, I shelled out the bucks for a Tyan S2895 K8WE mobo. I put in an IStar power supply that was on their recommended list. It is a great power supply, but it is too noisy for me to keep in the control room with me. I looked at getting an Antec Truepower II 550 EPS, but my tech said it wouldn't work with that mobo. I have emails in to Antec and Tyan about it, but I wondered if anyone here might be using that combination, or have some knowledge about it.

Thanks,

David
