Hi All,

I've attached what I think is a fix to our ADAT woes under XP.

This is a release version. If you run into trouble, just download the debug version from the previous thread and send me the adatdll.log file.

Cheers!

Mike

MIKE, YOU FREAKIN' ROCK!

Sorry for the all caps. But you rock in an ALL CAPS KINDA WAY.

Does everyone realize how *big* this is? This just eliminated the sole reason some folks had for not moving to XP.

Oh, by the way, I pick up my PARIS rig tomorrow (double Bundle 3 with lots of i/o); after that I build a PC to put it in.

Once I'm done I'll test with ADAT under XP card and see how it likes chatting with my Mac's RME 9632 card.

Thanks, Kerry!

This is going to mean that my rig can have a much faster computer because I no longer need to be able to keep a Windows 98 partition going.

I can hardly believe I've made it this far. :)

Thanks, Rich!

I'm just giving it a bit more of a shakedown right now by transferring 8 tracks to PARIS from my LX20. When I'm done, I'll dump them back. All is well. :)

I've been using a weirdo AGP based AM2 motherboard I had to order from England because I needed to run Windows 98 still for the ADAT card. Now, I'm looking

at Core 2 Quad motherboards with PCIe. I feel like I can finally get into the 21st century computer wise.

Sweet!

Oh ya Mr. Audet. You are one Development Animal !
You would be worth your weight in gold at ID if they
had their act together.

I will be testing your adat fix tomorrow along with the
last two releases I haven't had time to work with. You
sure have a knack for this stuff huh?!!!

Was it one timing correction that fixed both the syncing
and the multiple adat cards from showing up?

I will be donating shortly, you know that!

Hi Tom,

Thanks for the kind words. it's pretty cool transferring an ADAT tape in XP right now.

Unfortunately, I don't have 2 ADAT cards to test that problem specifically, but I debugged the shit out of the PSCL and the adat.dll to fix this. I don't think there is anything that would cause only one card to be recognized.

I think it's more likely that it was pure luck whether a slot responded fast enough to load the old driver. It was just unlikely that there would be two. My machine didn't even recognize my one.

If that bug persists and someone wants me to debug it, I'd happily accept an ADAT card. :) But, I think everything will be fine as it is. The PSCL loads the driver for each slot one after another in two steps. It's pretty "civil". I think the adat.dll was just not waiting long enough for slots to respond to its requests. It was also scheduling a "guard" thread that canceled requests if they "timed out." The code for that is in the PSCL and seems to be badly broken. I'm working just fine with it disabled. :)

The best part is that this is an improvement over the 98 driver. I used to have to unplug and replug my ADAT and swear at my ADAT card in 98 to get it to transfer a tape, probably because of that crap guard thread. This pretty much just works.

Life is good. :)
