been getting this more and more lately and I know the latest PSCL update from Mike was
supposed to bring this back down for dual core processors. Any reason it could be rearing its
head. Maybe a reinstall of the PSCL? What is the latest you have Mike?

I've been seeing this error quite a bit myself lately as well. What causes it? And does it actually
do anything? I've found that I can generally ignore it and nothing bad seems to happen. Is it
actually more than just an annoyance? (I.e., should I be worried?)
