---

I need a decent AD/DA to use to patch in to a pair of s/pdif I/O in one of my RMWE cards so I can add a couple more analog processers in Cubase SX during mixdown.. The name of this box gives me pause. The manufacturer makes pretty decent gear as far as I know. I have a keyboard controller and a couple of M-Audio format converters that are doing a good job around here. Anyone have one of these Cows or have experience with one?

Thanks,

Deej
