Try the 442 on card A...

David.

Good morning gents,

I finally took another leap and purchased a Lucid WC generator. Have three EDS cards in a 7-slot Magma (with one UAD-1). MEC connected to card A, MEC connected to card B, and 442 connected to card C. Edited the paris.cfg file to use house sync and the two MECs lock up fine to the Lucid. However, the 442 acts as if the WC cable isn't even plugged in. I'm using three separate 75-ohm BNC-BNC cables.

Any thoughts?

Thanks & happy holidays to all!

Mark

....or card C

;o)
