>under the pretext of war.

>

You Have lost many of the liberties that your fore-fathers fought so hard to attain from the hands of the semi-monarchastic government you've let flourish. (no? ...better read the sayings of your founding fathers...many wanted a king not a president.)

And the idea that the US can perpetrate war crimes and the like without answering to rest of the world, via the ICC, is virtually an admission of guilt, else why the need for protection from prosecution. Imagine if Hitler had this option. Or Saddam.

g that this makes the palaestina side
any better (i see more projections coming).

>No, you espouse selective pacifism which you conveniently misplace
>in Bosnia, but apply rigidly to Israel.

i dont apply it rigidly to israel, i just look at the numbers
and say whose approach so far was the most promising one,
whether that fits in your line of thinking or not.

i listed i think 3 examples where violence worked - WW II,
"iraq - the first edition" and serbia/croatia/bosnia.

i say you cant apply that to every scenario. that are
enough examples where it didnt work (the most obvious
from an american point of view being vietnam i guess).

>Derek, you SAID you were a pacifist, well, except for Bosnia.

....and a few other examples you so conveniently overlooked...

>Ok, so you are not a pacifist. How about taking off the moral
>equivilence between Israel and the Palestinians?

i want them all to be happy and live a peaceful live.
so i say what i think is the most promising way to go

about the situation, which i personally chose based on who had the best track record so far.

of course its not my call to make. so its more violence. well, their choice.

nothing on this has anything to do with me taking sides. i find religious fanatics too disgusting to actually even be remotely able to take any side down there. you have my word one that one.

>>- i dont blindly believe that everything on this world can be
>>negotiated
>
>Fair enough, so support us in our war on the ghouls and head-
>choppers. If ever there was a time for war this it it.

sorry, im not convinced. (your own words)

>De-escalation is what Spain did, and all those in London paid for it.
>This is not the time for de-escalation.

as if the terror attacks wouldnt have happened otherwise. you must be dreaming. terror is not under control. terrorists will do their thing whenever they can. they dont sit around and say "ok, well, spain wasnt impressed by the terror, so maybe we should just stop being a terrorist". there is no way to control terror completely. there may be a way to *reduce the chances*, but thats as good as it gets, and as everybody in london will tell you, they expected a terror

e, yes well Windows wouldn't even boot until I did a repair. ;o)

>As with all motherboards you can not compleatly control PCI steering.

Yeh well I haven't actually played with that yet, only had a look in the BIOS and the manual. In the next couple of days I'll have a further look at it.

>PCI slot 2 and 3 are the best ones to
>start with when adding cards.

I think I loaded the EDS cards into 2 & 4 at this stage. I'll have a look at where the interrupts are sitting hopefully tonight and see if a change is in order.

> I wouldnt bother with the SPDIF connector
>just plug in the USB/Firewire header.

I was actually hoping to use the SPDIF as very very rarely I use a softsynth or something from outside Paris and figure I could use the SPDIF to record them into Paris. Haven't played with it yet though.

Also I plan to get one of these famed DAC-1's in the next 12 months or so and would like to use it for that too.

> On most newer cases you will get
>and extra PCI slot space above the AGP slot.

My case circa 1998 has that. :o)

>The NVidia one would be the best one to leave
>enabled sense it is integrated into the chipset.

AND it's the gigabit one. :o)

> I would also use
>something other than the on board sound if you are using audio software
>other than Paris.

Only other thing I use is Wavelab, which I plan to have another shot at using the ASIO drivers for. Even though I use Wavelab, in any case I rarely make any audio decisions in Wavelab. Mostly I do all that in Paris. I might author a CD in Wavelab, but that's just adjusting track gaps times etc and sound quality isn't an issue.

>I'd suggest the MAudio AudioPhile 2496 or 192 models
>or use the M-Audio FW Audiophile. Otherwise RME stuff.

At this stage I'm still mostly a Paris guy, though the ability to use Cubase or something would be nice...

>Here is a quick guide to how I would install things on XP in general.

Hehe, geez, you do a bit of a dodgy rework and next thing you know everyone's

on yer case! ;o)

Seriously though that's some fantastic advice below and I will undoubtedly go though and do pretty much the whole thing to the letter with a couple of minor adjustments. You even provided links! How easy! :o) I can see I'm going to have to find the cash to get these hdd's a bit sooner than I planned aren't I? ;o)

Thanks heaps, and thanks heaps for that MB recommendation in the first place too.

Cheers,

e into this shit to begin with refuses to take my case saying that i should have known better than to follow his advice.

after the paramedics put my immobile body onto the gurney and in to the ambulance we proceed to the hospital where the crash cart awaits my expected arrival. making the final turn to the hospital entrance the rear door of the ambulance swings open as the first of two wheels hits the dead cat in the road. the ensuing bump while not large is enough to sever the relationship between the gurney and floor of my ride. my open eyes catch sight of the medics in the back as i pass them out the door.

the ambulance screeches to a halt but the gurney continues on striking a bike messenger just hard enough to alter my direction 90 degrees to port and down the rather sizable steep hill. as my speed gathers down the hill, the thought "oh crap" begins to replace the previous ...

i could go on about this but the memories are far too painful for me to continue and i'm sure you'll understand my stopping.
