Can two CPU's that are rated differently work in the same dual socket mobo?

I've got a possibility of buying an Opteron 2220 Socket F which is rated at 2.8GHz for an extremely good price, but there is only one. Myt mobo uses dual CPU's and I was wondering if I can use an Opteron 2218rated at 2.6 GHz in the other socket and if one CPU will run at 2.8GHZ and the other at 2.6 GHz.

Just curious....

Deej

Nevermind.........ain't gonna fly...........although I do think someone should try this ....just because

(it won't be me, however)

;o)
