Probably ever covered.
nevermind.

For the famous "can't stream data fast enough, blabla" :

Just increasing disk buffer i/o to 128K solved the problem.

Increasing the cache did'nt solved, but just allowed to read a few second more before error occured.

i'll be back soon with one or two presets for DPPROhall, wich surprise me more and more.
Definatly usable for decent mixing job with no budget.
