Sorry for such an elementary post. I'm new to PARIS on an IBM machine, have always run Mac. There are so many free plugins including Chucks. I hear of wrappers, yet I read a post lately where a post said they had just created a vst folder and put the plugins there. Would you just place the Dll file in the folder or what. I have a very simple setup a bundle III on a pentium III running XP on an 866mhz machine. I'm only about 2 steps above ignorant concerning IBMs so be gentle please ;^)any help will be appreciated.

VSTs that have an installer typically want to install to C:\program files\steinberg\vsts. Many here recommend putting all your vst dll files in c:\vsts so you won't have a long path.

I would also recommend putting them in c:\vsts but when you do this any installs (by running setup.exe or such) need to point them to c:\vsts.

Also, check c:\vsts after installs and if the setup.exe made subdirectories you will need to move the dlls out of them to the c:\vsts level so Paris can see them. Also make sure to tell Paris where c:\vsts is in the Paris.cfg file.

If I remember correctly, all of Chuck's plugins have a txt file with install info that tells you how to install and were to put what. As for VSTs in

Paris, I have never run them, only DX, EDS and hopefully 'Pulsar via external send' soon so I can't help ya there.

Good luck
