Il recorded simultaneously off the same take through a Sovtek 50W Tube head, into a 2x12 Celestion cabinet, same length & brand of mic cables, and into a Focusrite ISA 428 on the ISA-110 input impedance setting. While this may not be the world's best preamp for distorted e-guitar (personally, I think it shines much better on condenser mics), it's the only one that I had more than two channels of, and I wanted to get the exact same take for apples-to-apples comparisons on all these mics at least once.

Things to note:

1.) I did not pay any regard to the difference in output levels from one mic to the next... I figured this was pretty irrelevant, and simply made sure they all went to track at as close to the same levels as I could achieve... the point of this particular comparison is tonal differences, not how "hot" a given mic puts out at.

2.) The amp/cab combination used is a pretty solid reference (IMO) for a nice mid-l

e move to sonar asap,
it's a much better tool, especially for audio manipulation including looping
Acid style. And the synch internal and external is miles ahead of the old
cakewalk software.. unlike Acid, hehh.
