While we all have certain sets of paid-for plugins that we

are a good amount of freeware tools, as well. Below is a list
of freebie vst plugins that I have found to be most useful.

eliminated from the list because they were crap, and some
because they were poorly written (i.e: caused lockups,
crashing, glitches, etc.) or were too damn CPU-intensive on ANY
setting to be useful or practical. These are certainly also not

a lot of wild, bizarre ones that I suppose some of you doing
certain styles of music would find useful (like maybe
electronica or things in that vein), but are not really useful

a.) highly useable, with user-friendly interfaces & controls
b.) sound damn good, or at least sound damn good for a
specific purpose or two, and...

undue CPU power for no good reason

we all have different ears, but in any event I can guarantee

classification/category. ALL direct download links are for the
Windows vst versions (and specifically XP or later versions,

why I also supplied the product pages where applicable.

Off we go!

Comps/Limiters/Other Dynamics:

BuzMaxi:
Pretty damn good transparent brickwall limiter/volume

your 2-buss, baby! This is version 3 of BuzMaxi; if you can
find a copy of version 2 somewhere, I actually like that one a

GeneComp & GranComp:
Also from x-buz; GeneComp is a linear compressor, GranComp is a harder-knee compressor. Both come in singleband & multiband versions. I find that the presets are also pretty useful as a starting point for various stuff. Try out GranComp on Kik, Snare, Rock guitars & bass. Try the multiband GranComp on kick & set each band real hard & then duck down the level on the

(experiment with the band split frequencies to find what works

to EQ the kick at all! Grancomp is literally my most-used compressor now on individual tracks. Do it! lol

BrainDoc Compressor:

especially great on kik, snare & toms (on toms & kick will get

in there.

Ruby Tube:
A somewhat hard-nosed limiter that can also introduce some tube-

on what you like. Seems better on low-end-ish stuff overall.

DigitalFishPhones Spitfish:
The VERY BEST stand-alone plugin de-esser available, IMO

unit with other features). The product page & download links

some other plugins, as well. Toss the other ones,

Delays/Reverbs:

Classic Delay:

Can be set to tempo sync, or manual; has analog emulations, and
a really clean/pronounced digital delay sound. Good one!

capabilities as well. A very rich / lush delay sound.

PSP PianoVerb:
A pretty good-sounding, artifact-heavy (but in a good way)

BESIDES piano that it sounds good on, but it does sound really
good on that sometimes!

Gvst GDelay:
Need a very simple, highly controllable mono delay? This is it.
This one definitely seems to have some artifacts going on, so

stuff.

RoomMachine 844:

in a submix (like for a drum submix wherein you want to place
the drums in a room) or as a send-return-type of effect using
fully-wet settings on the output. Controls are very useful, and

control (distance from the source to the simulated mics), and a
stereo spread selector on each side (L&R) independently.

Voxengo EssEQ:
The EQ segment of vst plugins is really lacking in useful, high-

definitely useable if you: a.) run out of EQ bands for
something & you still need a little tweak somewhere, or b.)

end band on this is actually pretty nice for that!

the lower voice-count settings. Watch your blend between dry &

Other:

BrainDoc Channel Tool:
This is a very simple tool that basically allows you to set
levels/phase/etc on a single channel. Handy if you've got

something that you've automated volume on, and it's a little
hot or a little soft overall, but you don't want to rewrite all
the automation moves; OR if you're in a Native app & you've got
that overstuffed mix buss thing happening - just insert this on
all your audio tracks & bring all of 'em down by the same
degree (like we discussed in another thread):

Gvst GFader:
An even simpler version (level ONLY) of the Braindoc-type tool

without having to rewrite automation moves:

Download: http://www.gvst.co.uk/dlgvst/GFader.zip

Voxengo Audio Delay:
OK, this is NOT a delay chain effect, it allows you to delay
the sound by a fixed number of milliseconds or sub-increments
thereof. I found this useful when tracking a kit of e-pads &

for the e-pads, so I sent those to an aux buss, inserted this
on that submix, and delayed the audio by like 3-4 milliseconds

direct mics), and the blend of the two worked out great!
Probably you could find some other uses for it as well.

Voxengo SPAN:

will suck down a lot of your available cycles.

Voxengo r8Brain:

a plugin. Can also do batch conversions!

Simulanalog G-Suite:
A guitar processing pack that has some emulations of Marshall &

this as a primary guitar track thang, but I found it useful

recently when recording a split signal of a direct guitar
combined with an amped signal (yes, it went on the direct
channel LOL!).

This post has a Word document attachment that has the same
info I just text-posted in this thread, but laid out a little
clearer - use whichever works best for you.
