.com... or something like that.

Some of them are a little average though. Despite the corn, I was a fan of the one about making sure you have a car... ;o)

Cheers,
Kim.I believe he already stated that he checked the jumpers.

I just recently went through kinda the same situation. Getting blue screen or total lock up and finding the culprit is very frustrating. I thought it was my motherboard. Replaced it, with new CPU and memory... rebuilt a computer with the old motherboard and it worked perfectly fine. Come to find out... it was the video card (an ASUS). Totally had me baffled and cost me over 300 bucks. Never again will I buy an ASUS product!

Anyway, what I would suggest is to start with this tactic. Remove all your components. Boot up and see if it's ok. If so, then start putting components back in, one at a time to find the culprit.

My experience with windows is that I never rely on the BSOD message. But I used to get that "VXD" message occasionally when I use to use Win98. It usually meant a hardware problem. I use Win2000 now and I will stick with it, pe
