Hi All,

I noticed that the myparispro site is no more and was wondering where I could purchase the pitchshifter plugin.

I also was wondering if anyone was use bfd drum samples with paris and how you may be doing this. I had spoken with Rim at drumagog about the new drumagogbfd that will be coming out soon and it will not work in Paris. Just wondering if the best solution would be to add a second computer. What program would I need to go with on the second comp to enable me to be able to use drumagogbfd.

I'm guessing that if I had the UAD efx,that they would be used in the same way? Are the UAD plugs worth the investment of a seperate comp?

Thanks
David P
