Content-Transfer-Encoding: quoted-printable

<http://www.sweetwater.com/store/manufacturer/Euphonix>

Or at least posted on Sweetwater's site. Sadly, and not mentioned in =  
Sweetwater's listings, it's Mac only.

Sounds like a Euphonix + Apple + Apogee deal - rumor is maybe PC support =  
in late 2008. =20

Imho, that may be too late. Someone else will push out a PC/Mac =  
controller to usurp the MCs by then.

Dedric

Sweetwater says PC support is in the works, but we'll have to see what really transpires (I've emailed Euphonix about it).  
 The sales rep says they saw it in their product preview and it's a very nice unit - way better than the Mackie. He says  
 Euphonix thought of everything, except PC support of course.

Post market only? Imo, that depends on what you need for a music only studio - if a Mackie control

does the job for a music studio, the MC Mix/Control would likely do it better - more control and functionality and control of their monitor software as well (Mac of course). I hear the end caps come off so you can attach multiple units and have a larger controller. Also the MC Mix can function alone, or in addition to the MC Control. It does use Eucon, but no mention of there being an extra cost for it, so it sounds like it's included (e.g. no limitations with HUI or Mackie control protocol support).

Regards,  
Dedric

Btw - I just noticed there is a control room knob on the MC Control....  
check out the  
larger version of pics from Sweetwater's site - (a little zoom in a photo  
viewer/editor helps :-)  
There is control room software with it to run stereo up to 5.1 via Core Audio  
interfaces.

Jog/shuttle button selections for the wheel; transport buttons surround it;  
page, bank and nudge  
forward/back buttons above it with 2 more above - Applications seems to be  
the button that allows  
you to switch between application support (e.g. switch from Logic to  
ProTools to Nuendo, etc).

The description says you can setup an unlimited number of custom commands  
(key or macro) for the touch  
screen and scroll through them.

Check out the description on the Sweetwater site - seems pretty impressive -  
way more functional than a Mackie and  
many consoles. Assignable smart keys is way more than a post feature - just  
think of anything you use  
multiple key commands, macros, or even single key commands for, and it's a  
huge time saver to have those  
grouped in a single control surface.

Thanks Dedric.. Wow.. Mac only (for now). I have to see one of these up close.  
 It looks liek these are meant for the Post market still. Not for musicians..

Good god that's one of the stupidest things I've heard out of the audio world  
in years. Will these guys ever learn?

I guess like some others, we are looking for a C24 like product. We've asking for this for now going on 7 years and all they keep bringing out (Save for Digidesign) is these 8 fader units.

I've never been a mackie controller fan. This is not hard to do. 24 32 faders to support Cubase,Logic,DP,Sonar ..Again look at the C24  
<http://www.digidesign.com/index.cfm?navid=219&langid=100 &itemid=5342>

Dropthat baby into a argosy <http://www.argosyconsole.com/c24.htm> and you really have something that clients, yourself can be proud of...

Sounds like the Yamaha or Tascam digital mixers are a better fit for you. The MCs are a perfect fit for what I want for a specific purpose. It does still leave a gap in the \$5k to \$15k range for a dedicated mix/control console, unless you look at SSL, WK ID, Yamaha and Tascam as options. For sure in a large tracking or mixing studio, you need more faders just for convenience. That's not what the smaller MCs are going for.

Most people I've heard from on the C24 don't like it - saying it feels and looks cheap - like a larger version of the Digi00x controllers. I personally don't like the look of it - Digi seems to like to put out consoles that have a first look "wow" factor and a bad after taste (the original Pro Control felt pretty flimsy to me though D-Control may be much better). I would go MC5 or Fairlight myself, but that's my preference, and it's a cool \$90k or so more

than a C24 range, and console rather than controller.... but never fear, all in due time....

Being proud of a large console is great, but being proud of the payments on it and space expense isn't so easy. The product has to justify the gear or it's just borrowed vanity.

I dunno, LaMont, that's some pretty sweet looking design with the Eupohinx stuff. I think a lot of clients would be pretty impressed even if it doesn't look as much like a big analog console. Not that I'm likely ever to find out, of course.

It does look clean line..I think it does have wide appeal. I just think that there is the C24(ish) crowd like myself..

Hey. Vanity is still vogue. That big or mid consle impresses the check writers from labels adn ad-agencys.

I think you're write. It's either the Yammy or Tascam or Digi route.

The reviews I've read from beta testers of the C24 have been great. I personally love the layout and look. I saw those early post on DCU from posters who have'nt even seen the unit.

My sweetwater rep told me that unit(C24) is very impressive. So much so, that it will steal away D-Dommand users bigtime.

Lastly, you may recall the long thread over on the Nuendo forum last year concerning the Need for a nice Control 24(ish) controller for Nuendo/Cubase. I think 2 of the users were looking into building one. One guy stated that he was working on one for a company that he could nto disclose. But, that drawing looked exactly like what a lot of us wanted.. Oh well..But, I'm happy for you guys..

Subject: Re: Euphonix MC Control and Mix Announced  
 Posted by [LaMontt](#) on Thu, 03 Jan 2008 00:29:00 GMT

You know. There's this new resurgence of Apple is King of multi-media platform these days. With their run of current successes and stock prices. Along with Logic Pro, and with Vista problems.

You might be right, LaMont, but the market is littered with disastrous attempts at hardware controllers. Remember the SAK? The Houston? The Tascam FW line? The Houston was actually a very, very nice design (by Axel Hartmann, a true genius of audio gear design) with some QC issues at first but wound up being a pretty nice product.

I guess I'm Joe Capitalist this week, but with all of those companies getting their noses bloodied in that segment of the market, and a complete unwillingness of new players to step in, I have to wonder if the 'C24 crowd' just isn't big enough to make it a financially viable target. Not that I have any insight into this being true, but it seems like that's what the market thinks.

I've got a Houston here and it just integrates so flawlessly with Cubase that I'll likely not go with another solution. It's very easy to navigate using banks and keeps me in the sweet spot. If I ever wanted to use a different DAW though, I'd be looking at the necessity of a different control surface. I wonder if Reaper has EuCon protocol.....yeah....fat chance. If it did though, wouldn't that be sweeeeetttt.

Good points. If you did a search on Nuendo's and GearsLutz forums, there seemed to me that a lot of users/mid range studios wanted such a product in the Control 24 or New C24 range.

Man, I'm very jealous of that C24. Total integration with it's DAW..16(grace range Mic Pres), 8-stereo,16 mono channel sub mixer, Talk back..Surround monitoring..24 faders, with full master section.  
For those of us who got spoiled with the C-16, this is what we Dreamed the Paris and other DAWs front end mix/controller surface would become.

As for the Market: I think James M was and is right: The Manufactuers as a whole see a bigger market with the "Bed\_Room" guy/gals. 2-8 tracks at a time. USB2 interfaces, although you still can get a decent to good Firewire interface, but most of them are still based on the 2-8 channel model.

Hey, it's the Market driven as you stated.. I just find it hard to believe that Digidesign has software and Hardware for every studio budget..Wow!!

ZRumor has it that Pro Tools 7.5 or 8 will become even more muic creation friendly.. I track/edit with Neundo,Paris..Mix Pro Tools...Mabey it's time

to go all out Digi..

over the control 24. Not just the preamps and analog section, but the whole look - feel / ergonomics are further improved. I have not been a huge fan of the control 24.  
Having said that I prefer the MC by a large margin in terms of overall integration.

I held off getting an MC because of early info on the new controller, so I remain anxious to get my hands on one. I have contacts at Euphonix, so I hope to have one to try soon.

The new boards use Eucon as well, or a portion of it.

On 1/9/08 12:22 AM, in article 4784681f\$1@linux, "Gene Lennon" <glennon@NOSpammyrealbox.com> wrote:

---

Digi does not support Eucon. Shock.  
But the MC still feels responsive and at least as accurate and fast as the  
Control 24. Most MIDI controllers feel a little sluggish to me including
