I figured I'd ask the question here first. I'm doing a compilation CD for a client here in Wavelab. The duplication house needs an audio master CD, not data files. When I rip the songs in WL, they show up as sequentially numbered songs, no names. That's OK. I flythem into a Montage, name them there then burn them to a CD. the song names again become sequentially numbeed songs. The client wants the songs to how up by name. HTF do I do this?

Thanks,

Deej

Red what's!!!!?? It is possible to click on the song number at the bottom of the file and name it. That's what I'm doing. Are you at the shop right now? ;o)

How are you naming them? Editing the name of the red tags?

David.

Uhh... yes...

David.

Click on the CD tab in the montage. Then click on the CD Text box. At the bottom, move to the previous track so that you can give the CD a title, then move though each of the tracks and give them names.

David

-- and it works: you really do look smarter...

chas.

-- byt the way -- thanks DL and Deej for bringing this up -- I now
know something about WaveLab that I didn't know before... CD's will
leave here from now on chock-full of useful info. Gracias.
