We had the unfortunate demise of our main studio PC and I am a PARIS beginner and I started small with my waves bundle which seemed to like PARIS alot, no problems, however; now im trying to get my nugen, gearbox, and other assorted VST plug ins working but i have started getting this strange pop up when I load PARIS. Basically what happens is, PARIS loads then pops up a window asking to verify VST folder. This has started happening with all attempts to install plug ins port WAVES
