Hi All. Just another heads-up about one of the most useful utilities out there!

If you have a bunch of bundled plugins installed, (waves comes to mind , and only use a few, this little app will disable them.

Paris loads much quicker once you cull the dead wood.

Analog-x's version was cool, but it deleted them. With this baby, you can re-activate them at will.

COOL!!

It's 72kb, and doesn't install.

here is the link:

http://vb-audio.pagesperso-orange.fr/us/resources/plugin/vb_plugman.htm

enjoy!
