---

Hi everybody,

I'm redoing the acoustics of my room at home and I'm using suggestions for bass traps and absorbers from Ethan Winer <http://www.ethanwiner.com/acoustics.html>

What I would need now is a software (Mac) to measure the nasty ringing frequencies at a given spot so I can install absorbers and diffusers accurately.

I found this on the net <http://www.versiontracker.com/dyn/moreinfo/macosx/25161&vid=470175&mode=info>

Anyone familiar with this, or maybe other suggestions?

Any help in this domain is highly appreciated.

Best regards,  
Ab

You can pretty well cut the cost by 2/3rds if you are able to do the DIY thing

[www.recording.org](http://www.recording.org) has a acoustics thread...check it out

also John L. Sayers forum at <http://www.johnlsayers.com/phpBB2/index.php>

Lot's of good ideas as well as experienced people to answer your questions

As for software I used ETF 1.5 as well as a couple of others but unfortunately I lost them when my Laptop died

Don

What kind of mic do you need and how do you input it into the mac?

I was thinking of using a B&K 4006 (omni) through Metric Halo ULN2 interface.  
I'd only need the software.

Regards,  
Ab

I agree, I use MH interfaces all the time but hoped to get along with a less

pricier software for my needs. Thanks anyway.

Regards  
Ab

Don, thanks for the info.  
In fact, this project is a DIY one and since it's the first time I do a thing  
like that  
it's a hell of an adventure. I'm sure the room will sound better than before.

Regards,  
Ab

I googled but couldn't find it. Do you have a link?  
Thanks,  
Ab
