Hi,

I am experiencing some dropouts when I insert UAD1 plugz on different submixes.

What I have checked is that inserting plugz at the same submix there is no problem at all, but when UAD1 plugz are spread around 4 cards there are some dropouts.

Anyone experienced the same ?

I tried also the 256 disk transfer.

No EDS transfer used.

Regards,

Dimitrios

Never any dropouts, but I've got only 2 UAD cards. I wonder if your PCI bus is having trouble keeping up? Take out one of the UAD's and see if that fixes it, for trouble shooting purposes. Just an idea

Hi,

I have only ONE UAD1 card and 4 EDS cards.

UAD1 card lies on a magma chassis alone...

Well...  
Regards,  
Dimitrios

Sorry, I misunderstood you. There goes THAT theory.  
Have you tried re-installing the UAD software? What are you wrapping it with?  
I'm using fxpansion 3.3 with no problems.  
This is just a hunch, but you might try putting all the disk transfer and  
other "customization" parameters back to their stock settings and see if  
that fixes it.
