Oh I'm looking for pain alright...I'm gonna attempt to sync a third computer
(Atari) to these two using SMPTE

And then fly Midi into the fray just for the hell of it

Why?

Well to see whether it can be done

Don

Now if that doesn't complicate matters

Will it involve medieval devices of torture, and multiple-hamster-powered AC generators?

:D

We've got three horses outside and two inside. I'm thinking I could maybe build a methane powered PSU for my studio. If this gets off the ground, I could move on to figuring out how to get coconut shells and hemp twine to carry a hot enough signal to record. There's way too much in the way of petrochemicals in what we do. I want to build an organic studio.

;o)
