Ok,

So I'm going to give Wormhole another shot on my G5 DP5 - > PC Paris setup.

So as I understand from Dimitrios, I need to wrap this thing on the PC in a VST - DX wrapper?

I'm looking at FXpansion's website (<http://www.fxansion.com/index.php?page=31>) , and don't see such a product.

I already own the VST-AU and VST-rtas adaptors, which of course are mac only.

Anybody know what it is I need, or what I'm talking about?

Cheers,

TC
