Hi,

You know that all submixes except for the main submix1 have LR outputs on Paris intrconnection table ?

This works !!

You can either hear your separate submixes thru your headphone (attached to corresponded MEC) or send this LR output to a MEC's pair of outputs !, or even bring them back to the same submix so you can record your drumtracks that are located to this specific submix to a stereo track so you can the apply VST/DX !!

TIP II

You can output all your submixes say four Mecs give you four sets of stereo submix outputs (if you happen to have four eds cards) stereo outs to a second PC running Cubase and there process with VST/DX before mixing to a stereo inside Cubase

Regards,

Dimitrios

Oh man. I \*so\* needed that trick yesterday, and I just might wind up using it today on either of two sessions - thanks!

OK, I'm a little confused.....

Exactly how do I do this?

-Will
