When I mix, I seldom boost frequencies over +2-3dB with digital EQ's. One reason is headroom, but another equally important reason is that I really haven't experienced a digital EQ that sounded that good when boosting frequencies more than +3dB. This is one reason I have been keeping analog hardware in my rack. The analog hardware works much better for this to my ear. Well.....the UAD-1 Neve EQ is accomplishing the same thing. It's very "hardware'esque" so now I can hose my mix bus headroom really quick and therefore have to start over from scratch much sooner than before so this saves me time.

;oP

Hey DJ,

How are you using the UAD-1 Neve with Paris?
