See.....I told you you were using pirated software, but did you listen???.....NOOOOoooooooooooo!!! Now, that, if you'll just start sending me that \$100.00 licensing fee, I'll see that it gets to the *right people*.

This is the best line in the article - nearly fell out of my chair reading it:

"The Redmond behemoth asserts that one reason free software is of such high quality is that it violates more than 200 of Microsoft's patents."

bwaahhhaahhaa!!!!

I never knew patents could impede progress and efficient design.

Dedric

You almost cannot overstate the potential impact of this litigation on the shape and future of the internet, and how business is conducted. In a way, it would be like the railroad barons of the 19th century suing anyone who used a wheel, axles, and brakes, for infringement.

This is really important, and it is really important that MS loses...

DC

That's a useful analogy, Don.

It appears that Microsoft may be attempting to "innovate" the legal system to try to control things they didn't invent.

This would fit with past Microsoft criminal behavior.

Cheers,
-Jamie

The killing of technologies, corrupting good technologies, crappy products, call centers in India, monopolies, government bribes and favoritism, corporate

espionage, and out right theft, all make for a nice world.

It's hard for me to support a company like MS.

Speaking of call centers in India, HP is really starting to suck. Their newer drivers for PC and Mac both suck. I hate any software that insists on getting in the way when I'm trying to get some work done. Talk about spyware virus-ware, It's a pain to turn off, and uninstalling HP software is a PITA to, it tries to keep showing up and connecting to the mother ship, reminds me of MS.

I liked the HP video. I thought it was a creative way for our boys to get in their mandatory target practice.

Here's a little SUN shine for HP: <http://youtube.com/watch?v=YOnRJi9QJr8&mode=related&search=>

While Americans are out of work, people should let these companies know that we don't appreciate Indian call centers. It really is too bad, HP is not the company it once was.

I still use MS and HP products, but for not too much longer. They don't need anymore of my money anyways.

The thing is, though, that M\$oft isn't suing anyone. What they're saying is, 'Linux infringes on 235 patents. We won't tell you which ones, but they do, just trust us.' Then they are going to their big corporate (and maybe educational, I'm not sure) customers and saying, 'If you have linux in your server room or even if your geeks use it on their desktops, you're infringing on our patents. However, we're reasonable people and realize you might need more than one platform in your backline. So you can either move your linux servers over to our stuff or you can pay us a licensing fee to indemnify you on the patent infringement.'

The reason they're going this way is if they were to litigate, say sue Red Hat because they're publicly traded and have a balance sheet, then they have to come out and say exactly what's being infringed upon. And it's probably stupid shit like having a menu that can be used to open a file. SCO did something similar, saying that IBM had used SCO code in their linux work and took them to court where IBM has so brutally cleaned their clocks that M\$oft isn't going that route unless they have no choice.

So it's not something being litigated now, it's a classic shakedown. 'Good Morning Mr. Don. My name Vinnie 'the Firestarter' Corleone. I was just noticing your lovely house and all of the wood it happens to have in it. I'm sure you have insurance but you have no idea how inconvenient it is when your house catches on fire, it'd a terrible strain on you and your lovely family. So I was thinking, my brother is in the fire department, and he only lives a few doors down, for only \$150 per week I'm sure he'd be happy to keep an extra close eye on your lovely house and be sure nothing happened to it.'

All of which to me shows how hollow M\$oft is becoming. While companies like Google are pressing out and expanding on what you can do with your computer, M\$oft is reduced to crudely shaking down their own customers. Not much of a business model.

Subject: Re: This could get interesting

Read what I said more closely, James. I don't think they'll sue anyone, because if they do then they patents can be contested/dismissed or worked around. The free software community is very accustomed to such situations and has done so before lots of times. They have nothing to gain from suing and everything to lose, but lots to gain from threatening to sue.

Contrary to popular opinion IP rights are central to free software. Without them the GPL (or the Debian license or whatever) becomes unenforceable. Most free software people question software patents in general, but the enforcement of copyright is the only thing that allows the GPL to have teeth.

I realize this is tooting my own horn a bit, but here's a link to what Linus has to say, which is damn to close to what I wrote before I read this piece.

Thad,

I have to say that I am dismayed this has come to pass, but I guess it was

inevitable. They (ms) laughed off/ignored free software as long as possible. That's the first strategy of the entrenched, pretend there is no alternative. It's not possible to ignore free software anymore.

I agree, Chuck, but I think the only danger is to other corporate entities having to pay MSoft some money. And in the long run that's going to hurt MSoft more than anyone else. It will make them seem like an untrustworthy, unpredictable partner and will push even the big boys to reconsider how much they rely on them.

WOW,

You can get a patent on almost anything these days.

Kool.

db~Id like to see that sometime.
