Can you get a daw with plug in compensation that is rock solid for \$2000  
not counting the computer?

I would agree that Steignber's Cubase SX & Nuendo are one thee most stable  
DAW's in the business. Logic Audio on a good fast Mac is solid. As is Sonar  
& Digital Performer. All i al, I would have to say that all of today's native  
DAWs, including ProTools LE & M-Powered are rock solid stable.

I would recommend Samplitude and either an RME or Emu I/O. One of Sam's virtues is that it contains very good effects and EQs, so there is no \*necessity\* to buy plugs. You will need to buy VSTis if you want them.

Hi John,  
Hell Yeah.

Street prices-  
Cubase SX 599.00  
(Nobody does it better)  
RME Multiface2 w/ HDSP PCI card - 899.00  
(Best sounding AD/DA for the money)

This leave you 500.00 bucks to buy plugins or something.  
If you want a control surface then the Mackie Control will be your best  
bet. 999.00

Chris

what defines a native app Lamont, whether any processing is done on external hardware or not? native meaning all processing is done by the pc right?

Cubase forums say "You wont be able to hear any effects whilst recording, but you can keep the buffers high in cubase"

Sound like daws are still in the dark ages. Do any of them let you hear the effects whilst recording not to mention having plugin latency compensation. 16 i/os would be nice too.

Does Pro Tools LE & M-Powered have plugin latency compensation?

or a Mac :)

Strangley Paris & Pt uses a little bit of native processing, like in Paris  
Intelligent mixing or native submixes, DX & VST plugins.. In PT, Rtas & HTDM  
plugins

For me, a dual G5 with Logic is low latency enough to record with software monitoring enabled, which allows plugin FX to be heard during tracking (they don't get recorded of course, you can change them later).

Alternatively, some interfaces (MOTU 828MII, for example) offer hardware monitoring with a set of sends/returns so you can dedicate a hardware reverb for tracking - if you want the lowest latency, essentially no latency, signal path.

Cheers,

-Jamie
