Anyone using a service like this, or looking at one like the upcoming google health online one?

<http://www.healthvault.com/>

<http://arstechnica.com/news.ars/post/20080221-concerns-loom-as-google-begins-testing-health-records-system.html>

Thoughts? Concerns? Kudos?

Every patient in the hospital I work in has their current and past medical information in the hospital's computer system. If some hacker wanted for some reason to look a patient's diseases, surgeries, or medications, I suppose it's possible. Government agencies in our current paranoid climate would probably only have to "ask".

I also know that my clinic has my records online, because they have a program called "MyChart.com" or something like that where I can review my own lab results, imaging, vitals, etc. I haven't been inspired to check it out, but now that you've brought it up, I think I'll ask next time I see my doctor about security and who has access to that information.

The advantage, of course, is for practitioners to have your health records accessible if you are in a situation where there isn't time for you to give it to them, assuming you're even able to.

Mixed feeling, I guess. Real privacy may be a thing of the past for most of us.

"Mixed feelings" is the logical response. I wish we lived in a world in which we could trust to put our personal info out there for all to see, but reality and history teach us that personal privacy must be protected rigorously from private, business and government data gatherers to prevent its exploitation.

I heard recently about a program to record the DNA of all British citizens, and frankly that scares the crap out of me. I mean, what if all that British DNA "accidentally" gets mixed in with the DNA in the rest of Europe or even here in America, we could face an international "debeautization" that might take decades from which to recover. You know that when traveling in Europe the best looking people are always in the country you visit directly after England.

But seriously, until we live in a truly sane world (which I know we will some day), I won't trust my personal info to anyone I don't absolutely have to.

Totally against the idea

yes I'm paranoid

oops there's one psychiatric problem outta tha bag

damn!

Dear Bill L,

As a former British woman, I found your joke in poor taste. Not that I can taste anything with these decaying snaggle teeth jutting out every which way.

Thanks  
Charlene
